About Diamon-Fusion International

Since 1997, Diamon-Fusion International (DFI) has been making people's lives easier and more beautiful by developing, manufacturing and distributing protective coatings, application machinery and restoration products for architectural and transportation surfaces such as glass, granite, tile, porcelain and quartz.

DFI's coatings significantly reduce maintenance costs, are impact, scratch and graffiti resistant, and can keep surfaces looking and performing like-new forever. DFI's product offering ranges from award-winning, patented, professional-quality products available through authorized applicators and distributors to easy-to-use highly-effective, do-it-yourself products for consumers. Headquartered in Southern California, DFI holds patents and patents-pending worldwide and has a global sales and distribution network spanning North, Central and South America, Europe, Asia, South Africa, Australia and New Zealand.

DFI's Flagship Products and Services

The Diamon-Fusion® Protective Coating – a patented 2-step hydrophobic protective coating that utilizes chemical nanotechnology to create a covalent bond with silica-based surfaces such as glass, ceramic tile, porcelain, granite and quartz. The protected surface becomes highly water- and oil-repellent, impact and scratch resistant, easier to clean, graffiti and scratch resistant, more brilliant and a host of other benefits.

The FuseCube™ Protective Coating Application Machine – a highly automated machine that applies the Diamon-Fusion coating to both sides and all edges of up to 450 lites of glass in less than an hour. Offered in three sizes, up to the Jumbo which can fully coat even jumbo-sized lites, the FuseCube can save applicators up to 84% versus traditional spray-applied coatings.

Building Beautiful™ Restoration and Protection Services – on-site services for commercial and residential buildings to remove staining and other damage from exterior glass and protect it using the Diamon-Fusion coating for long-lasting performance and dramatically reduced maintenance requirement. Clients include Nike and California Academy of Sciences.

Executive Team:

Adam Zax, Chief Executive Officer | **Rubin Turner**, Corporate Counsel
Russ Slaybaugh, General Manager and Vice President | **Guillermo Seta**, Corporate Vice President
Scott Wingate, Acting Chief Financial Officer | **Todd Gentry**, Director of Operations and Strategic Planning
