

We have been using Sperry West covert cameras for many years. In this past year we had a situation that resulted in the arrest of a thief less than 24hrs after the crime was committed. We used the motion detector covert camera connected to a Digimerge Touch DVR. The thief entered the bagel store located in New York City while work was being done by contractors. The restaurant was in full operation at the time because the work being performed was in the basement. The burglar acted like he was a building inspector and was "taking notes" on a clip board. He walked all throughout the basement and found the office. Although there was no money on the desk, there was a laptop. He walk in to the office looked around and put the laptop in his backpack. He continued his note taking and walked out the way he came in. The laptop was soon discovered missing. We accessed the DVR and discovered the burglar. I was able to print perfect photos and video and the police apprehended the thief very soon after. The police said they were very happy with the quality of the video and pictures and it helped in the results.
