#### Flexible & Cost Effective

- Integrates seamlessly with the iTrak Incident Reporting & Risk Management System Daily Log
- No software deployment required
- Customizable and mandatory field selection
- · Customizable
- · Real-time report creation
- Optional topic, location, author data collection configuration

#### Secure & Anonymous

- Customizable and secure existing iTrak user, property and department configuration
- Configurable for http over SSL security
- After the report is submitted no editing or viewing is allowed.
- Author may print out a copy for their records

#### Powerful

- Configurable information collection and reporting
- Provides remote access for reporting purposes
- Wizard driven data collection requiring no training
- iTrak auto notifications support for Anonymous reporting

In today's highly regulated and sensitive environments, providing an effective, confidential and secure method of anonymous safety and security reporting of events and activities is a necessary component of a successful, compliant and ethical enterprise.

iTrak Anonymous Web e-Reporting guarantees the capture of reports and incidents, regardless of where they arise within the organization, ensuring a consistent process that allows you to collect, manage and learn from all the issues and events that pose risk to your organization.

Anonymous e-reporting saves data entry time, accelerates the investigative process and promotes an organizations commitment to a safe and secure environment. With Anonymous e-Reporting, an electronic incident form is provided over the Internet, with information collection accepted securely and confidentially into the iTrak Incident Reporting and Risk Management Platform.

Since iTrak e-Reporting is perfect for locations where you don't have a dedicated security presence but still need the ability to report incidents (e.g., a retail store, a warehouse, a remote office, etc.), you can easily widen the scope and effectiveness of your iTrak Incident Management and Reporting system without bringing on additional users and unnecessary expense. Customize from three different templates, then tailor the template to match the imagery and terminology of your organization. Customize the data entry process further by personalizing the onscreen text, choosing the fields required, updating field labels and making necessary fields mandatory.

The iTrak Web Portal delivers a consistent interface into the iTrak reporting environment enabling users familiar with the existing platform, navigation and data entry to easily work with either interface.

The iTrak Web Portal can be accessed from virtually anywhere over limited or advanced network infrastructure, enabling remote reporting and data access with no footprint.

The iTrak Enterprise Web Portal provides intranet/internet access for any employee or iTrak user to submit daily log and incident events and reporting to the iTrak System for further investigation. This provides secure access and confidential reporting for enterprise or students, contract employees or any individual to communicate information for central investigation management.

By providing a combination of remote web reporting and complete integration into existing iTrak Incident Reporting & Risk Management Systems, the iTrak Enterprise Web Portal ensures real-time data reporting and access across the enterprise.
