

Introducing the Lamboo® Climate-Shield™ Cladding Solution

The Climate-Shield Rain Screen System offers more design options and provides architects, builders and owners the most complete, flexible and well-designed rain screen system available. Whether your rain screen project is commercial or residential, whether the siding is being installed vertically, horizontally or diagonally, the Climate-Shield System offers a complete design solution for your specific exterior cladding needs.

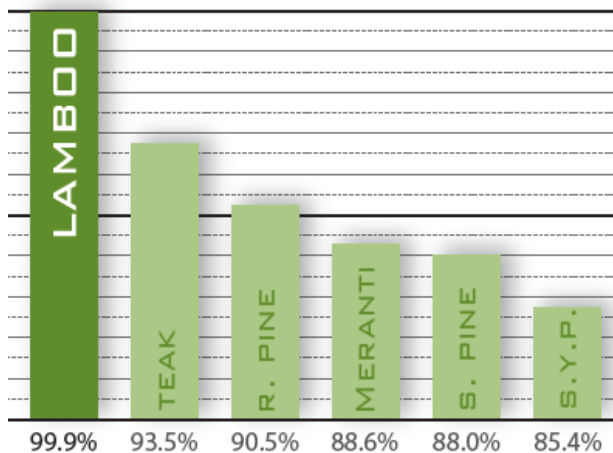

From the starter rail all the way to the soffit, the Climate-Shield System offers superior marine-grade aluminum components that are exceptionally strong and extremely long lasting. The system is designed to exceed the engineering specifications required to withstand 200 MPH hurricane force winds or the equivalent seismic forces.

Lamboo® ELEMENTS™ Rain Screen Cladding

Lamboo ELEMENTS cladding for the Climate-Shield Rain Screen System is the ultimate combination of sustainable building materials and sustainable design. From the Climate-Shield aluminum components with a high recycled content to the rapidly renewable Lamboo cladding solution options it's all about beauty, durability and sustainability.

Dimensional Stability

Sustainable Design Solution for:

- Rain screen cladding
- Soffits, ceilings and fascia
- Exterior trim and architectural millwork

USCGBC LEED® CREDITS – May contribute: (Leadership in Energy and Environmental Design)

- MR Credit 6 – Rapidly renewable materials
- MR Credit 7 – Certified woods (available on request)
- IEQ Credit 4.4 - Low-emitting materials
- ID Credit 1 – Environmentally preferable material
- ID Credit 2 – Life Cycle Assessment/Environmental impact

Lamboo Rain Screen Cladding can be stained a variety of colors to meet your design goals.
