ROOF
SYSTEMS®

Google

Size: 16,320 Square Feet

Location: 1501 Salado Drive

Mountain View, California

Challenge *Failing BUR with Cap Sheet Roof*

- Provide a cost effective system that provides a superior monolithic roofing membrane without the disruption of a tear-off and disposal.

Solution *AcryPly® 10-Year Roofing System*

- AcryPly roofing system using both asphalt emulsion and AcryShield A-503 base coat with A-400 top coat.
- System was applied directly over existing cap sheet roof.

National Coatings AcryPly System was applied with no impact on the productivity of the employees inside the building.

"The Google Salado building was our 6th AcryPly roof restoration job for Google's Campus in Mountain View, CA. Google is very adamant about using sustainable building practices and environmentally responsible materials. They also want as little disruption to the people working in the building as possible. Since the system is fluid applied – there is little disruptive noise and the acrylic does not put out noxious fumes. Kent Jobe (National Sales & Marketing Manager) of National Coatings has helped us to transition to an all-acrylic system which Google and our technicians like even better." Scott Siemer, President at Just Leaks, Inc.
