

## How to Use iLeads on Your Android Device without Android Market or Google Play, using your Android browser:

**1. Download the App** on your device. Using your Android browser, type the following URL: <https://www.leadslightning.com/apps/ileads>

- If you get a security pop-up message, tap Settings
- Slide radio button to “Allow installation from this source”
- Tap Back and you are taking to original installation page
- Tap Install

---

### 2. Set It Up on Your Device

- Download and launch the app on your device.
- Tap New Event.
- Enter event access code found in the Access Code email you received. (The email comes from iLeads/LeadsLightning)
- Tap Confirm.

---

### 3. Start Capturing and Qualifying Leads

- Open iLeads.
- Tap on your event name.
- Tap New Lead or Tap Scan button if displayed.
- Type attendee’s badge number or scan the barcode if there is one on the badge.
- Tap done.

---

### 4. Get Your Leads

An internet connection is needed to upload your leads from your device to the secure website, [www.leadslightning.com](http://www.leadslightning.com). Use the user ID and password contained in your Access Code email. If you have purchased multiple licenses, this account allows you to view all your collected data from the show.
