MedicsKiosk™:

Your Clipboard, Automated!

Used by patients in the waiting room to input data directly into the practice's Medics system, MedicsKiosk does away with the clipboard and sheets of paper requiring pen or pencil.

Instead, with MedicsKiosk, the patient receives a tablet or laptop PC through which MedicsKiosk is invoked. It can also be accessible via a stationary, desktop PC.

MedicsKiosk eliminates the staff time needed to manually enter patient data into the system from paper forms…time that almost always includes errors and typos, often because the patient's illegible handwriting can't be deciphered.

- Instead of writing, patients electronically input data directly into MedicsKiosk.

- Intake staff only needs to confirm the demographics as entered by the patient are correct. During the encounter, the provider confirms the patient's medical information in the same manner.

- Any corrections or clarifications are made directly in the system on the patient's account…not by hand on paper forms.

MedicsKiosk is intuitive and easy to use, prompting the patient throughout.

It's time to eliminate your preprinted or photocopied forms. Let patients self-serve with MedicsKiosk!

Contact ADS for more information on MedicsKiosk and our complete suite of solutions which includes the MU Stage 2 certified Medics EHR, MedicsPremier™ for Practice Management, and the MedicsRIS for Radiology, all of which are available in cloud or customer hosted (client server) formats.

See why thousands of providers and system users rely on ADS!
