Beverage Solutions

Providing facility design solutions to beverage companies involves more than just warehouse configuration. It will take significant cooperation amongst all departments to operate efficiently. We help clients understand the optimal way to proceed.

Beverage Facility Design Services

Warehouse and delivery operations are at the heart of your revenue stream, and your operational decisions form the basis for financial success. enVista stands apart in that we are not a material handling equipment vendor merely providing equipment recommendations. Our consultants, systems and industrial engineers analyze your operations requirements and develop process improvements to support your long-term goals. We develop a roadmap for your physical process as well as your IT platform and software to provide specific beverage solutions to fill all the gaps. The idea is to simplify the process with solutions that deliver results that will exceed your expectations.

enVista's Beverage and Facility Design Build Services are uniquely qualified to deliver visibility into your total supply chain, from source to consumption. We help customers develop functional operating procedures coupled with the appropriate equipment and technology to improve the bottom line.

We work with Beverage Companies to:

- Increase customer service
- Decrease operational costs
- Improve warehouse and delivery throughput & efficiencies
- Increase the ability to accommodate product line growth
- Optimize inventory & maximize space utilization
- Minimize picking errors, returns breakage and repack
- Create an ergonomically friendly work environment

Beverage Operations and Supply Chain Expertise

enVista's leading consultants bring over 30 years of direct beverage operations and design build experience to optimize your warehouse and delivery operations. We understand your business processes, challenges and how to design cost effective solutions that exceed your requirements.

A Strategy Designed for Results

We believe that keeping the balance between the three core organizational components *People, Process and Technology* is key to your company's operational success. The synergies of these components provide the mechanism for your warehouse and delivery operations to exceed customer expectations, enabling companies to increase efficiencies while reducing costs. Strong operational processes and procedures, coupled with the appropriate equipment and technology, provide *"the total solution"* for your organization.

Providing *"the total solution"* means doing the proper research on the floor, or in the trade, to understand the major issues and then conducting the data analysis that sets the framework for the operation process flow and design requirements. Once the design criteria is set, our team of operations professionals and engineers apply our knowledge and expertise along with the required process improvements, equipment and technology to develop a comprehensive solution.

Our Facility Design Build Services offer a single point of responsibility, from facility concept to beneficial use of the system, significantly reducing project timelines, internal resource requirements and overall investment.

Our experienced team of beverage experts partner with you and work on your behalf to enhance all facets of the project deliverables while managing the entire scope of the project to ensure success.

Enterprise Consulting Services

- Corporate Strategic Planning
- Operations and Facilities Planning
- Lean Materials/Process Flow Analysis
- Inventory Capacity Optimization
- SKU Management Solutions/Slotting Analysis
- Manpower Alignment/Financial Analysis and KOI Development
- Computer Simulation Modeling (Demo 3D/AutoMod)
- Vendor Pricing, Selection and Contract Negotiations
- Detailed Systems Engineering
- Project and Program Management
- Freight Management

Materials Handling, Design and Implementation Solutions

- Operations & Materials Handling System Concept Development
- Racking and Warehouse Location Labeling Solutions
- Mechanized and Automated Conveyor Systems
- Order Picking and Layer Picking Systems
- Product Transportation Solutions (AGVs, Custom Forklift Attachments)
- Palletizing Systems (Mechanized and Automated Solutions)
- Direct Store Delivery Systems

Beverage Technology Solutions

- ERP, OMS, RAS, WMS, TPM, DSD and TMS Solutions
- Voice and RF Systems
- IT Managed Services (SaaS Hosting, Support, IT Network Infrastructure)
