

Top Benefits of Going Paperless

Real Time Information:

The monitors are displayed in the production facility for all to see and share information. Therefore the information is available to everyone and any changes can be viewed by all and are easily and immediately implemented.

Organization and Document Control:

Document organization is a major part in any lean facility's operations. Since paper drawings are not disseminated to individuals throughout the facility, information cannot be misplaced. (Chances are good you won't lose a mounted computer). All drawings are organized within one accessible location in a computer file, not stacks and stacks of filing units. The documents are managed and controlled by the employees of your choosing, not the entire corporation.

Now where did that computer monitor go???

We must admit, Murphy's law is inevitable and what can go wrong, will go wrong, or sometimes we need to stop a current work order in the middle to begin a time sensitive order.

Flexibility and Efficiency:

The paperless manufacturing environment allows a quick and easy transition from one job to another. You can easily stop the work order you are working on, complete the new order, and go back to the previous job without shuffling important plans.

Enhanced Visuals:

This is an employee favorite. Some parts are very similar and look alike at first glance. With the monitors, there is no confusion on which part number is being worked on.

The correct drawing is on the screen and everyone is working off the same one. The monitor also provides a more vibrant visual with no color distortion. With projects that are color sensitive there is no confusion as to whether the red wire is actually orange as a result of poor printing resolution.

Is it orange? Is it red?
Are these even the same pictures?

Clean Assembly Areas:

The table surfaces are free of clutter. Unnecessary papers are eliminated as the important job information is displayed on permanent fixtures.

We all care about the environment.
(at least we hope so)
So why not save the trees?

Environmentally Friendly:

Cost Savings:

And finally we get to the words that all businesses know and love... **Cost Savings!**

It may not always seem like much, but imagine the additional monies in your pocket if you eliminate the cost of ink and paper from printing multiple copies of each plan, AND every change to that plan. Why not eliminate these unnecessary costs?
