Updating Your System – Options

There are two options for upgrading your system which are outlined below.   Pricing and effort are based on averages and may vary based on the unique implementation requirements at the customer site. Please contact your Customer Advocate for a complete analysis of your migration requirements.

JobBOSS Product Line Lifecycle - End of Previous JobBOSS Versions Product Support

Upgrade from Currently Implemented Version of JobBOSS to Latest Version of JobBOSS

Upgrading to the latest version of JobBOSS moves all data forward to the most current version of JobBOSS. It may require updates to the technology infrastructure, i.e. SQL Servicer and database conversion from Access to SQL, if the current technology is not being utilized.

Standup New JobBOSS Instance - Keep Existing JobBOSS Version as Reference

Creating and implementing a new instance of JobBOSS allows companies the opportunity to start fresh with clean data and an opportune time to changes processes and practices to improve the efficiency of their operations. There is a potential that the technology will require upgrading but the transition from Access to SQL for those customers impacted is no longer required, reducing the risk of potential data corruption.

Options & Related Costs for Updating JobBOSS*

*Assumption: It is assumed a valid support and maintenance agreement is place. Pricing will vary for companies that do not have valid support and maintenance agreements.

Advantages and Disadvantages of Upgrade Options

Upgrade from Currently Implemented JobBOSS Version to Latest Version of JobBOSS	Standup New JobBOSS Instance – Keep Existing JobBOSS Version as Reference
Advantages	**Advantages**
Legacy data is available for history	Opportunity to start fresh with clean data, new setups, more accurate reports
	No risk of data corruption
	Can fix all of those things that would have been done differently
	Potentially less costly than full upgrade path
Disadvantages	**Disadvantages**
Legacy data may be dirty and need database clean-up efforts, or not convert well	Historical info only accessible in read-only and cannot be upgraded
Risk of corruption during A2S	JobBOSS support for old system no longer available
More costly than standing up new instance on average	If server becomes non-functional data may not be recoverable
