Planet Products Corporation's "artists" include over 35 experts with 10 to 20 or more years of in-house automation experience. From project managers to engineers, sales support to quality assurance specialists, your project is guided from prototype to installation with seamless precision. And when it comes to science, our 54,000 square foot facility incorporates all the technology and resources required — from CNC machining/turning centers to our state of the art inspection facility — to deliver true turnkey design, engineering and manufacturing assistance.

Anyone can listen Solutions spring from understanding

Planet Products monitors the performance of over 5,000 customized packaging and assembly installations worldwide ... five times more than our nearest competitor. If that number surprises you, it shouldn't. In fact, our automation solution partners include many of the world's largest food processors and consumer products companies. JONES

At Planet, our focus is innovation but our process begins with people. People who listen. People who learn. People who conceptualize the challenge, then turn those concepts into custom, turnkey automation solutions.

Planet Products D.E.A.L.s meet the challenge

Our Digitally Enhanced Automated Lines [D.E.A.L.s[™]] are custom-engineered, integrated solutions designed to meet specific assembly and packaging demands, often employing advanced robotics and vision system technologies to dramatically enhance the efficiency of unscrambling, orienting and conveyance operations. Examples of operational Planet Products D.E.A.L.s include systems for lunch meat slicing and conveying, fill and seal package assembly, sandwich cooking and assembly, and packager reloading.

Controlled atmosphere packaging challenge:

For a major package goods manufacturer, Planet Products designed and built a packaging system that would automatically place, gas flush, seal, stack and over-wrap trays of shortening sticks at a rate of 4,000 pounds per hour.

Planet Products frank loaders ... still the world standard

Long recognized as the world leader in frank loaders, Planet Products has continued to incorporate innovations that set the standard for quality, efficiency and return on investment. Indeed, our next generation frank loaders will use vision systems and enhanced processing techniques to eliminate operational error and conserve orientation of processed foods from manufacturing to packaging. If you're planning for acquisition or upgrades, call us to find out how the newest Planet Products frank loaders will guarantee improved performance.

Bulk frank loading challenge:

For a major hot dog manufacturer, Planet Products designed and built a single automatic frank loading system to unscramble, orient, count and load 13 different sized products while inserting bagged boxes and escaping filled boxes.
