Welcome to Your Screening Solutions Provider

Step inside TEMA Isenmann's Lexington, Kentucky, headquarters in the middle of the Bluegrass State's horse country to experience the world-class manufacture of screening panels for your business.

Welcome to our state-of-the-art 60,000-square-foot facility where our mission is to deliver screening solutions, not a piece of plastic with holes. In other words, we do not merely apply standard design products to non-standard requirements. The single focus of our organization is meeting your custom and standard screening needs. We offer a complete line of screening systems designed for efficient, productive separation of materials ranging in size from fine powder to primary scalping all of which are American made to your specification.

As a producer, you need screening that can withstand the rugged environment of mining installations and specialized processing facilities. You look for exceptional durability. You expect accuracy in separation. You rely on application specialists with technical expertise to address all screening problems. We provide all that and much more. We offer screening products and accessories engineered by our best-in-class team who are ready to assist you in selecting the proper screening and separation equipment.

Our composite polyurethane screening panels lead the industry by resisting abrasion, corrosion and wear. All of our patented systems are engineered with simplicity in mind, resulting in a lower screening cost per ton.

Whether the material is granite, limestone, trap rock, ballast, quartzite, sand and gravel, ores, minerals, diamond and gold ore, or any other basic material, even agricultural products, we can meet your screening needs. Select from polyurethane screens in standard modular, tensioned, bolt-down or fabric designs.

We stand behind our Three-Point Guarantee, which simply stated is to screen efficiently, produce properly graded material and provide cost-effective service life. Our commitment to quality and service has earned us many awards and commendations from clients.

At TEMA Isenmann, we offer more proprietary polyurethane types to satisfy your unique screening needs for maximum impact resistance and excellent wear properties. Our exclusive formulas are the best in the business. Whether your application is wet or dry, we have the engineering capacity to design any panel to meet your needs.

Our in-house tooling facility and engineering department offer more options than anyone else. We can custom design and produce any hole pattern in any quantity, any material, anytime.

TEMA Isenmann takes a hands-on approach to crafting screens. With a passion and attention to detail, technicians prepare each panel before casting.

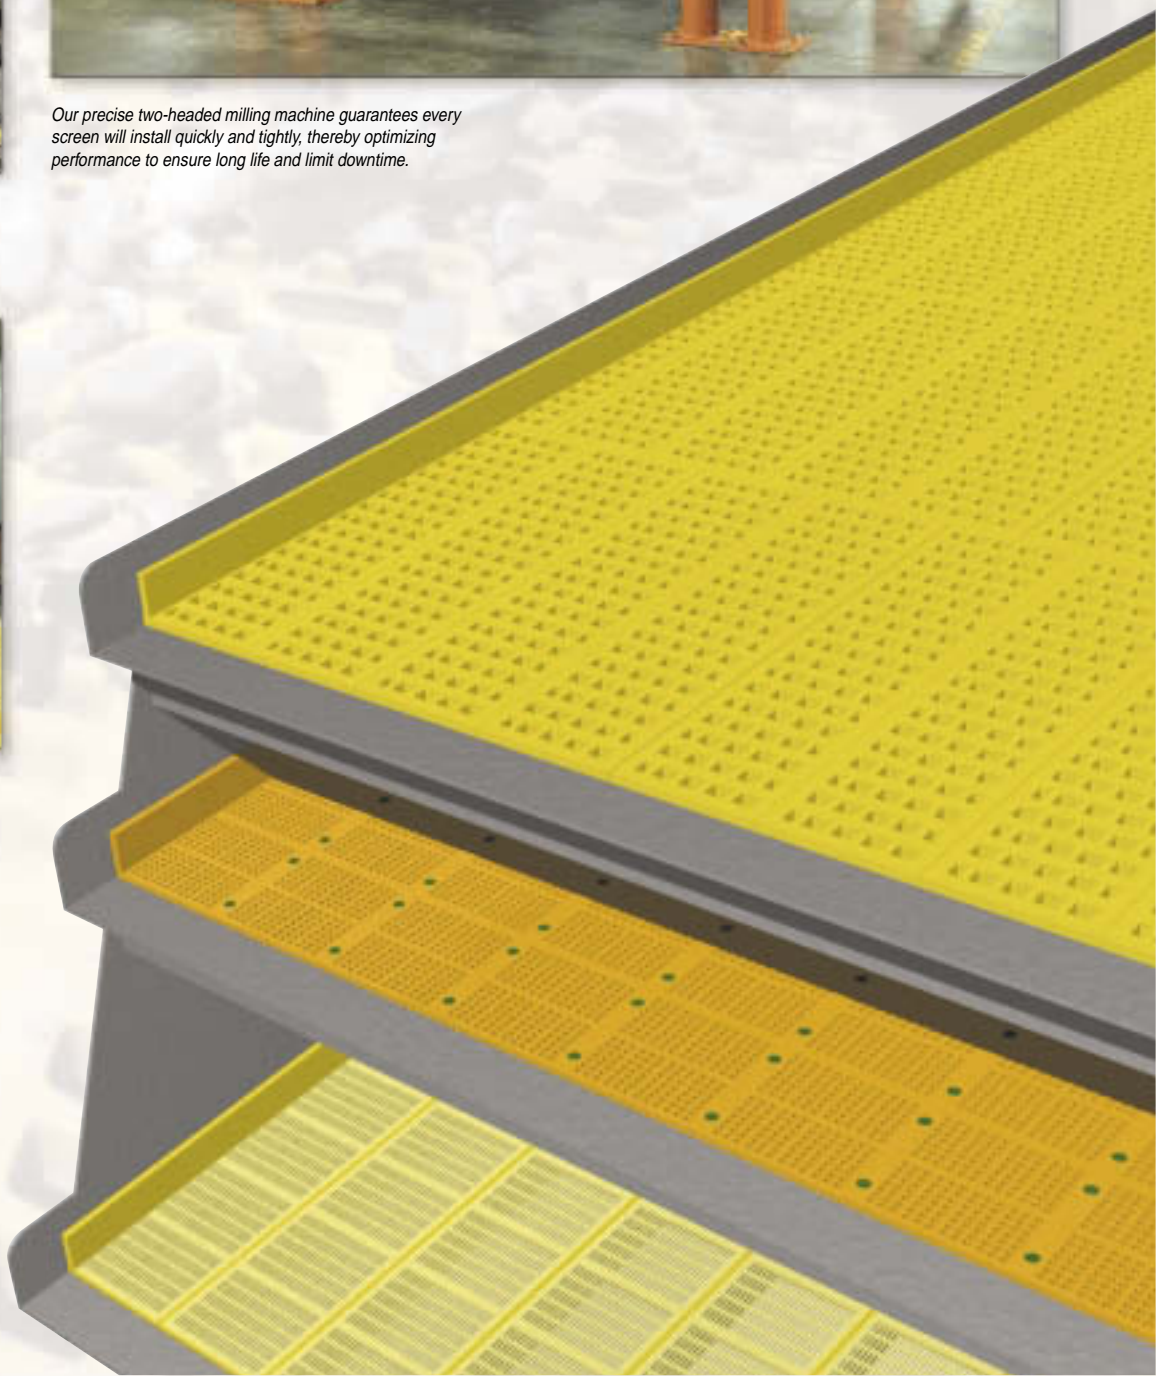

Our precise two-headed milling machine guarantees every screen will install quickly and tightly, thereby optimizing performance to ensure long life and limit downtime.

Delivering the best screen for your application is our only goal at TEMA Isenmann. We check aperture, base height and material on every screen. Using durometers, our quality control technicians also ensure proper screen hardness before your panels leave the plant.

TEMA Isenmann's highly efficient and long-lasting deck setup for a typical aggregate screening includes open-cast WS85™ Modular System on the upper deck followed by medium aperture, injection-molded Kombideck™ and concluding with guaranteed, non-blinding Flex-A-Thon™ panels.

TEMA Isenmann, Inc.

Because downtime is costly, we stock a variety of screens that can be shipped the same day out of our Lexington facility or from a local representative's stocking warehouse near you. Our extensive representative network is available for emergency troubleshooting, installation assistance as well as follow-up and order tracking. An aggressive reinvestment policy assures you of the most technically advanced equipment, the highest quality control, efficiency and productivity. We are dedicated to delivering the most cost-effective product for your application and are similarly committed to the well-being and growth of our employees.

TEMA Isenmann is proud to be part of a worldwide group of companies that includes the following world leaders in the materials screening industry: Steinhaus GmbH; Isenmann Siebe GmbH; Siebtechnik GmbH; Hein, Lehmann TuF GmbH; Tema Group and Multotec Group.
