

“OMG! We think we have an HAI”

Disinfectants are the first line of defence against pathogens wanting to wage war on your healthcare facility. But is your disinfectant really providing you with the protection your patients and staff deserve? Consider the evidence:

- Some disinfectants promise disinfection in two minutes but are **unable to attain the requisite wet dwell time** to achieve compliance. *If they dry too quickly, they're simply not doing the job.*
- Some disinfectants play the numbers game by including a long list of bactericidal and virucidal kill claims but often **do not include important ones like Norovirus**. *If the claims are not relevant, you may not be killing what you need to.*
- Some disinfectants claim to feel better or have pleasant scents but **still require personal protective equipment**. *How effective are your disinfection outcomes if your staff are concerned about their safety?*
