

BlueSky Suite

Version 8.9.2

Available Now!

- Field Attributes can be defined in the World definition and applied consistently across all reports and associated worksheets, with the option to override at the report level.
- BlueSky Admin now has even more information. In the user analysis button, a tab has been added that provides a more detailed view on users, roles, workbooks, and other security attributes. The detailed view is cleaner to export, log, and analyze in Microsoft Excel™. This tool is also useful when performing user audits and user access analysis.
- Administrators can share reports with multiple roles and users in less steps.
- End users can create Multi-Purpose Reports with added “World Level Conditions.” Allows for more report flexibility and focuses on the relevant data.
- Added the ability to migrate or promote Static reports and Control Center Editors to different environments.
- New Data Sort tab, now available for ALL query wizards in BlueSky products, for easy sorting of query results.
- Parameter Creation Process has been streamlined via the parameters wizard for a more focused data scope.
- BlueSky Static Reporting Tool. Report distribution lists can now be sorted for easier searching and selection of recipients.
- New easy and convenient way of registering software and accessing help files
