Capabilities Statement

Drive Positive Outcomes by Making Sound Decisions

Federal, state, and local government agencies today have enormous amounts of data but not enough decision ready information. Additionally, these agencies are more pressed than ever to find new ways to improve their resource management functions and report on their performance and results. They need visibility into their data, so they can improve operational readiness, efficiency and effectiveness, responsiveness, budget planning, and accountability.

Analytics solutions can help public sector agencies at all levels of government better understand the results of spending, track progress against goals, and share information with other agencies, regulatory and legislative authorities, and citizens.

Deep Insight into Business Analytics

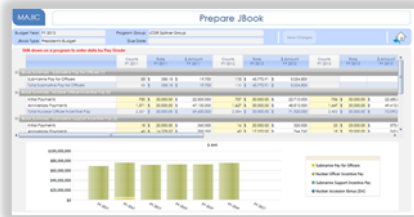

Neubrain is a new breed of IT solutions company. We offer industry-focused and business-oriented technology solutions that address our customers' unique challenges and needs. Our business model allows us to quickly deliver hard economic benefits.

As a full-service solutions provider and systems integrator, we manage the entire system lifecycle: strategic planning, methodology development, business process review and consulting, architecture, change management, system engineering, software requirements, design and development, deployment and post-deployment support. We specialize in the integration of leading COTS packages as well as emerging technologies.

Proven Track Records of Success

For nearly a decade, Neubrain has managed to provide excellent value to all of our clients and maintains excellent referral and client satisfaction rating, while delivering solutions at a fraction of the cost and deployment time of traditional vendors.

Government Comptroller Toolkit

Our state of the art decision support system can be used by budget and finance analysts, cost planners, and program managers to perform Planning, Programming, Budgeting and Execution (PPBE), Congressional Budget Justification (J-Book), analysis and reporting tasks.

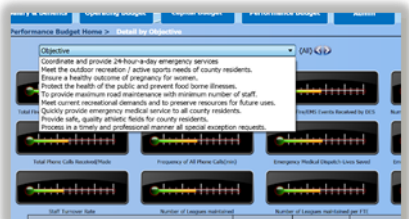

All-in-One Budgeting and Performance Management

Our all-in-one Budgeting and Performance Management solution provides a complete view of how your organization is doing and helps you project where it needs to be for the future.

Pay and Personnel Budgeting

Our Pay and Personnel Budgeting solution includes budgeting for an unlimited number of employees and positions. Budgeting can be done by positions or at the most granular level, such as by employees. Budgets can also be created for existing or unfilled positions, funded and unfunded positions, frozen vacancies, transfers, contractor positions and more.

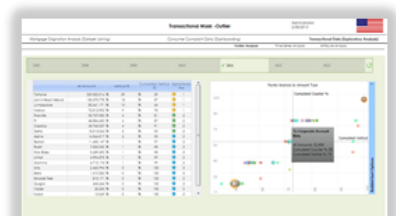

Performance-Based Budgeting

Our Performance-based Budgeting solution unites formal cost-based budgeting with performance-based goals, helping to evaluate cost structures on the basis of outputs they generate. It looks forward, not backward, and establishes system-wide conformity that flags performance variances.

Driver-based Planning and Cost Modeling

Our Driver-based Planning and Cost Modeling solution uses your key operational drivers and business activities to model financial data such as revenue projections, headcount, spending, and capital requirements.

Data Analytics

Designed to help government agencies reduce fraud, waste, and abuse, our solution includes features and functionalities needed to build pervasive Data Analytics applications quickly.
