LET ASYMA SYSTEMS

HELP YOUR BUSINESS

BE MORE

PROFITABLE!

Asyma Systems Ltd believe in using technology and management best practices as effectively as possible to make your business and organization succeed. We help companies by providing innovative and sound proactive professional advice products and services to enhance the financial well-being of your organization. We believe in win-win relationships. If the benefit cannot be shown to outweigh the cost we will not proceed.

We add value to your BUSINESS

To efficiently manage on a consistent basis you must develop good business processes. Improving business processes represents the greatest hope for positive, lasting change in all organizations. They define the way in which business gets done. An organization can be no better than its processes allow it to be. Asyama realizes that all processes can be improved, making them an excellent place to start looking for opportunities to improve business performance.

As new management best practices evolve and business automation software is enhanced, business must evolve to take advantage of these changes. **ASYMA** specializes in business process analysis and has provided companies and organizations like yours with detailed analysis which can reduce or eliminate the countless wasted hours, and resources every year. We will help you eliminate duplication and human errors to allow you to optimize your processes for ongoing success. We help you take advantage of the technology and management practices advances.

Process Improvement never stops. Competition and markets change, and experienced employees are hard to find. Capturing your employee's knowledge of how the organization processes work is essential to guarantee your organization's success. **ASYMA** can help you capturing that knowledge and preserve it with training manuals and process flowcharts. With a clear overview, the organization can tap into the knowledge of its own employees to identify improvement opportunities.

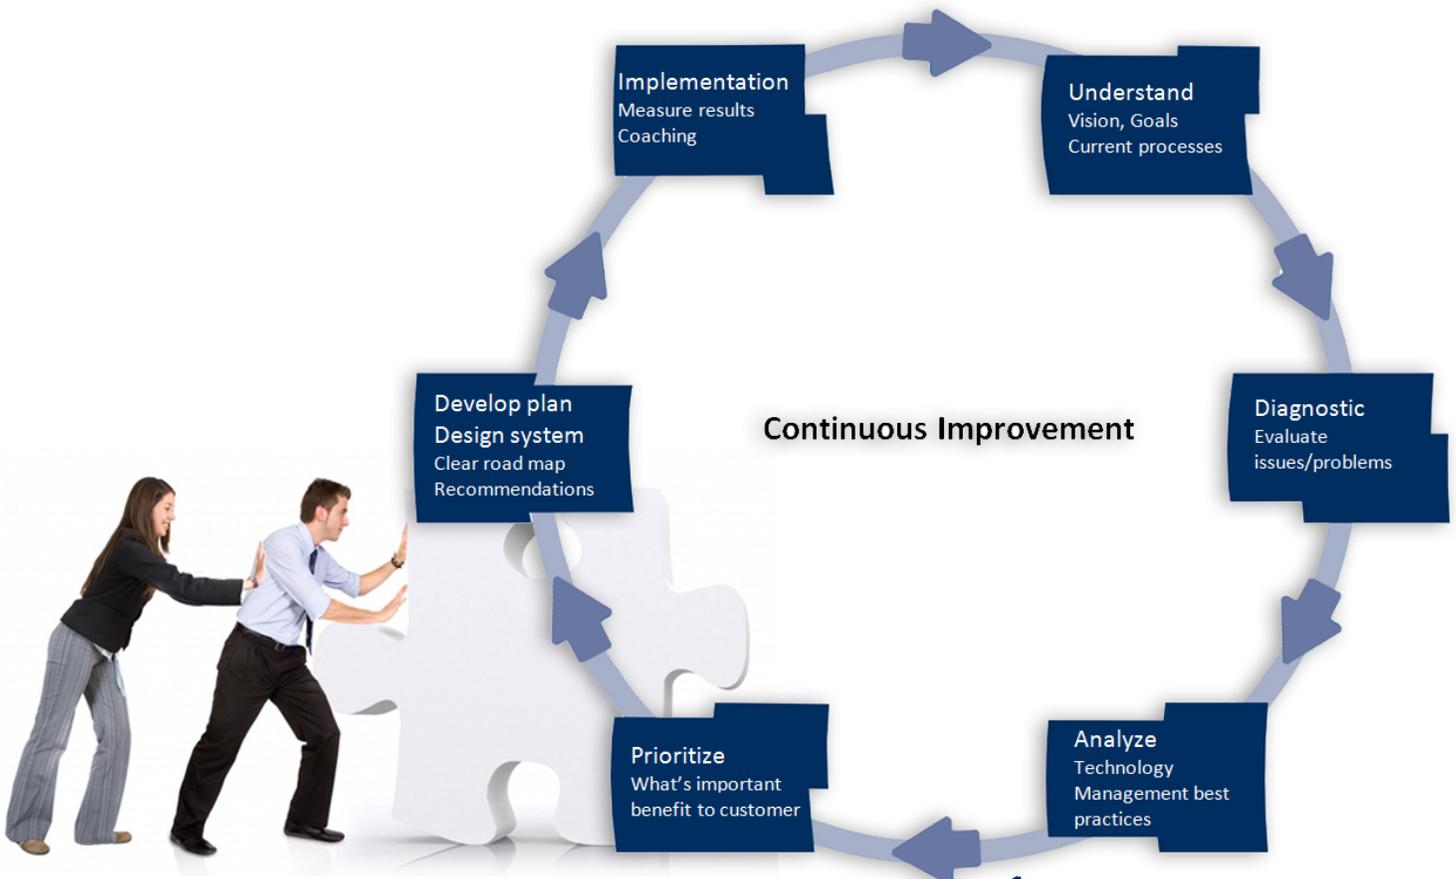

Our consultants take the time to understand your current situation and consider all areas, including

organizational structure, technology, and personnel roles/responsibilities. Once we have a thorough understanding of how you currently handle business processes and why, we work with you to identify and prioritize the issues. Not all processes carry the same value or have the same importance to the organization. Therefore we must determine the importance to the company of each issue to ensure that resources are focused where your company will receive its best value.

Our Business Improvement Approach

1. We interview your employees, listen and understand your vision and goals.
2. We listen, analyze and understand your current situation and business processes.
3. We review existing barriers and roadblocks that need to be eliminated.
4. We analyze best management practices that meet your processing requirements.
5. We analyze new business automation solutions that meet your processing requirements.
6. We prioritize issues and problems and decide what is important.
7. We develop custom processing requirements listings.
8. We design and flowchart the new processes.
9. We create a clear map and flowchart the steps required.

Recommendations discussion	•	•	•	•
Investment	\$7,500 - \$15,000	\$4,500 - \$7,500	\$2,500 - \$4,000	\$250

AT ASYMA we ensure your results by providing to our customers a money back guarantee. If after one year you feel that you have not received sufficient value to offset the cost of the process analysis we will refund to you the difference. Our goal is 100% customer satisfaction.

We often find many operational areas where small changes have the potential to yield big returns. In fact, customers who implement the recommendations typically see a return on their investment in one year or less, and several clients have realized an annual savings of over \$250,000 per year.

ASYMA SYSTEMS LTD provides an integrated approach on each of its focus areas to better help our customers bridge the gap between strategy and action – resulting in realistic, useful, sustainable business process solutions. Advice is great, but it is useless unless it is acted upon. Our greatest value to our customers is we don't just advice on how solve your problems but we will implement the solution with guaranteed results as well.

With this review there is no pressure to purchase any of the software solutions we sell. If our findings show that you would benefit with a software solution we do not offer, then we will make the recommendation to implement that solution. **ASYMA** is in the business of providing businesses and our customers with solutions and services that will provide the greatest return and value; even if that solution is not through us.
