

For Immediate Release

Akorri, Daymark Announce Channel Partnership
*New Agreement Brings Akorri BalancePoint Software to
More Enterprise Customers*

LITTLETON, MA. – February 5, 2007 – Akorri, Inc., provider of breakthrough software that helps companies optimize IT infrastructure to meet application service levels, and Daymark Solutions, Inc. today announced an agreement to make Akorri's BalancePoint™ product available to Daymark customers throughout New England. The channel partnership agreement authorizes Daymark, a leading provider of information technology solutions, to resell Akorri products and services in the New England region.

"Daymark is a trusted advisor to many enterprise customers," said Rich Corley, CEO and founder of Akorri. "As an established provider of IT infrastructure solutions, Daymark has a deep understanding of the challenges customers face in managing today's increasingly complex IT environment, and is well-positioned to help Akorri accelerate our growth in 2007 and beyond."

"We're pleased to have Akorri's BalancePoint on our roster of IT management solutions," said Daymark General Manager, Brian Casey. "Their cross-domain approach to infrastructure management solves some key problems for customers that previously would have had to look at two, three or even more products to address. Together Daymark and Akorri will be able to help customers get much more value from their investments in IT infrastructure."

Akorri recently announced the availability of BalancePoint, the company's flagship product line, BalancePoint is the first enterprise-class software product to use cross-domain analysis to help optimize servers, storage and other IT resources to deliver the best possible business application performance. Based upon Akorri's intelligent modeling technology, BalancePoint helps companies achieve service levels and reduce costs by providing unprecedented levels of control over increasingly complex IT environments.

About Daymark Solutions, Inc.

Daymark, an experienced technology solutions provider serving the Northeastern United States, provides and implements best of breed primary server, disk, tape, and recovery solutions for open systems.
