

**No priming. No Suction hose.
No plugging. NO PROBLEM.**

Flows to 18,000 GPM give you all the volume you need.

Choose regular, intermediate or high lift to match the vertical rise at your pump site.

Use the PTO from your tractor for power. You can also choose on-frame diesel, gas, LP or electric power for a totally self-contained system.

Choose the frame style you need: Humpback (pictured) for long reaches, Short Hitch for tight spots, Three-Point Hitch for your steepest applications.

Depending on the material you're pumping, choose either water lubricated or sealed bearing protection systems, and single or double suction.

“My trailer pump has served me well for 15 years. Not one thing has gone wrong... One word of caution: be sure you have a good supply (of water) and a long ditch.”

– Lyle Pickthorn

When you need to turn up the volume on water, our trailer pumps are the perfect long-term solution. For flood-control, wildlife refuges, irrigation, dewatering and dozens of other applications, SRS Crisafulli trailer pumps are moving millions on gallons of water at locations around the world.

Just what is it that makes our pumps special? First, a choice of unique impeller designs gives you more flexibility: the closed impeller moves a high volume of water, while the open impeller can handle slurries, trash, dirt and solids.

And, our pumps are fabricated and customized specifically to your needs. While there are high-efficiency pumps out there for clean water, they often can't handle the variety of materials our pumps can. When the water is dirty, you can count on the SRS Crisafulli pump to handle the grit without seizing. Plus, because our pumps come in a variety of configurations, you'll always find a match for your need.

Humpback™ Trailer Pumps

For the longest reach, choose a humpback. (21' standard, but for even more length, ask about 10' and 20' trailer extensions.) The discharge and lube lines are at the front of the pump, so you can connect the discharge hose and grease the bearings without getting your feet wet. High volume performance goes without saying.

Short Hitch Trailer Pumps

Our short hitch pumps are designed for approaches that are both level and deep enough to submerge the pump case in a short distance. At just 15' overall, this pump style is perfect for those tight spots.

Three-Point Hitch Pumps

Our PTO-driven three-point hitch pumps boast the portability SRS Crisafulli is famous for, while handling your steepest banks. You can pump at a 60° angle while keeping your tractor level.

On-Frame or Stand-Alone Power Units

Don't want to tie up a tractor? Put power right on the pump frame: choose diesel, electric, gas or LP. Or, put a trailer or skid-mounted SRS Crisafulli power unit to work alongside your pump.

“(Our SRS Crisafulli pump) is probably the most effective and trouble-free piece of equipment we own.”

–Darwin Pfaffinger, Smith-Pfaffinger Ranch

If you don't want to use a tractor, try a skid or trailer mounted diesel or electric-PTO power unit.

Ask for a diesel engine mounted on frame for an “all-in-one” system.

If electricity is available, a sealed electric motor can give you quiet and efficient pumping power.

Add a slurry gate to make your pump a powerful mixer. Open the gate to mix, then close it to pump away the slurry.

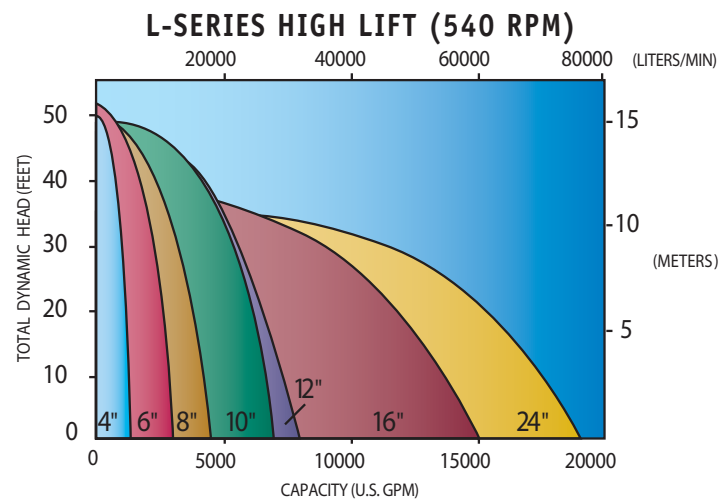

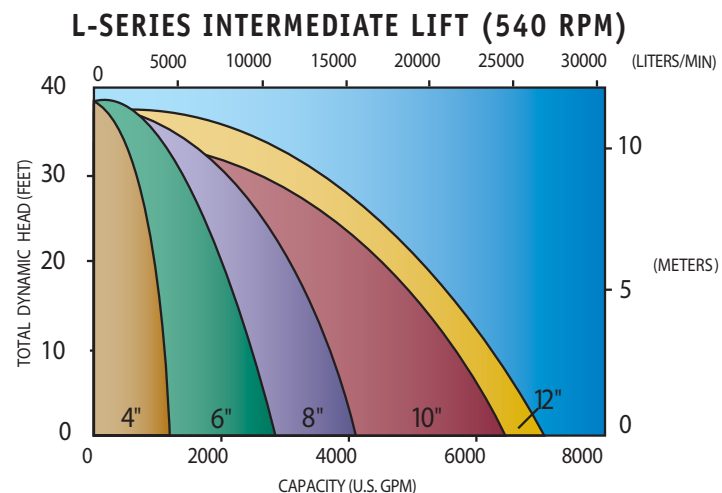

Rugged SRS Crisafulli trailer pumps can handle up to 18,000 gallons per minute (68,000 liters per minute), and lifts of more than 50 feet (15 meters). Their super portability means you can transport them easily.

Why SRS Crisafulli?

- 🌀 Steel construction – Our trailer pumps are built of 1/4" (standard) or 3/8" (industrial) mild carbon steel for durability and strength.
- 🌀 Single axle trailers with heavy duty driveshafts – move your trailer pump from site to site easily and safely.
- 🌀 Sealed bearings or waterlube bearings – SRS Crisafulli trailer pumps are custom-designed to match the kind of material you pump.
- 🌀 Discharge sizes of 2" to 24" – we offer a full range of options to match your volume needs.
- 🌀 540 and 1000 RPM available.
- 🌀 Leading technology – After 40 years, customers still say, "SRS Crisafulli is the best."
- 🌀 Completely customizable – choose special materials of construction, power source, bearings and suction. Call us – together we'll select a pump that's just what you need.

Our high volume trailer pumps are built for the long haul.

Need to transfer high volumes of water and wastes, yet want a portable design? There's no better choice than a SRS Crisafulli trailer pump.

Common applications for trailer pumps...

It's easy to use a SRS Crisafulli trailer pump: just submerge the pump case, then turn it on. That's all there is to it. Chances are, your pump will still be giving you good service in 10, 20, or even 30 years - it's that reliable.
