

# Our hydraulic pumps HANDLE the INDUSTRIAL strength jobs.

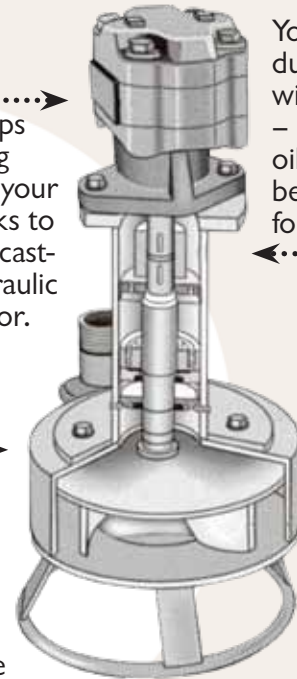

**STANDARD DUTY**

**RUGGED DUTY**

.....→  
Our pumps won't bog down on your job, thanks to a rugged cast-iron, hydraulic gear motor.  
←.....  
Your severe duty pump will keep going – it has an oil-filled bearing frame for long life.

.....→  
We can build pumps that stand up to most any material. An abrasion-resistant impeller and volute are effective in dirt and grit.

**SEVERE DUTY**

- ☞ Pump materials ranging from clean water to silt, sediment, sludge, and mud.
- ☞ Choose discharge sizes ranging from 2" to 10".
- ☞ Pump capacities from 50 to 7,000 GPM (190 to 26,500 Liters Per Minute).
- ☞ Pump at rated capacity immediately – simply submerge the case and start pumping – no priming or suction hoses required.
- ☞ Choose one of our hydraulic power units, sized to fit your exact needs.

## Common applications for hydraulic pumps...

- ☞ Construction sites
- ☞ Irrigation
- ☞ Mines and quarries
- ☞ Dewatering
- ☞ Animal waste
- ☞ Dredging
- ☞ Water transfer
- ☞ Drilling mud pits
- ☞ Emergency pumping & oil spill handling

"We've run our pumps in an environment that would destroy almost anything with moving parts. This hostile atmosphere did not challenge the incredible performance of our Crisafulli pumps."  
Mike Green, West Pac Environmental

# PERFORMANCE

Our SRS Crisafulli™ industrial-strength pumps handle industrial-strength wastes: biosolids, residuals, mud, raw sewage, sludge and more. They can be powered by almost any hydraulic equipment, or we can build a power unit for you.

Thanks to rugged construction, a versatile Crisafulli™ hydraulic pump will be one of your most durable pieces of equipment. The pump is also easy to set up, easy to use, easy to maintain, doesn't need priming or suction hoses, and immediately begins pumping at capacity when submerged.

Choose from three pump series.

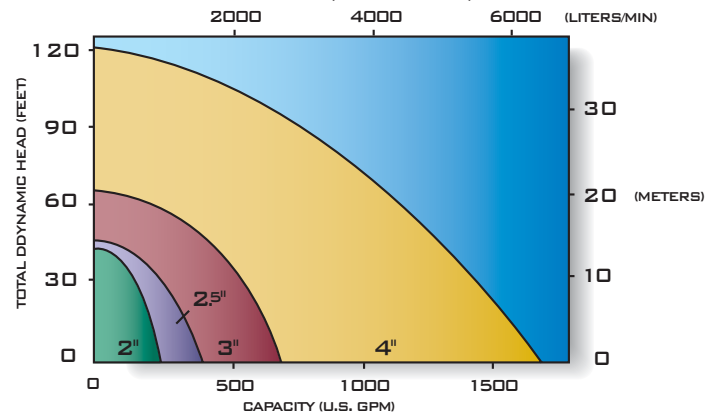

- ☞ S-Series pumps are our smallest and most portable.
- ☞ J-Series pumps efficiently handle higher volumes and more solids.
- ☞ L-Series pumps are the ideal choice for the highest flows.

You can harness the power of our hydraulic pumps with tractors, backhoes, excavators, or one of our hydraulic power units. You can also add a slurry gate to mix and agitate, then close the gate and pump the waste away.

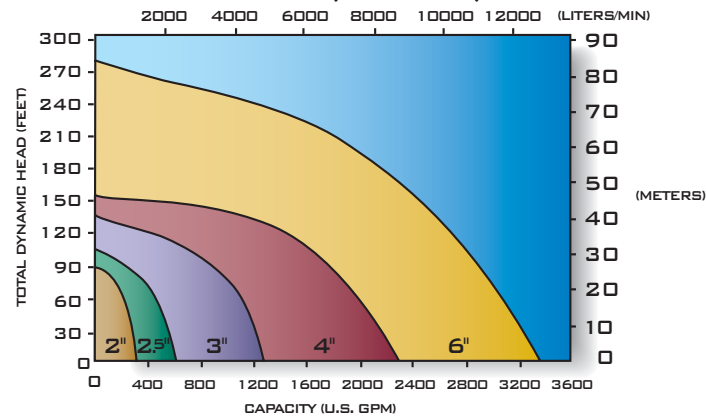

All of our hydraulic pumps come in Standard, Rugged or Severe Duty models. Severe Duty pumps feature a totally enclosed, oil-filled bearing frame that prevents shockloads from reaching the motor.

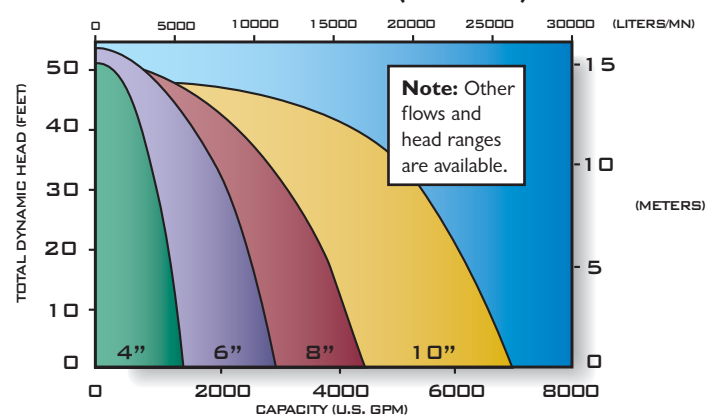

**S-SERIES (1750 RPM)**

**J-SERIES (1750 RPM)**

**L-SERIES HIGH LIFT (540 RPM)**
