

TELVIEW COST ANALYSIS

Even the most experienced tariff analysts can spend a good deal of time navigating carrier and state PUC websites. In fact, CCMI has found that the average analyst can spend **23.9 hours per month** looking up tariff information on these sites. With TelView's online telecom document library, that analyst can look up the same information in only **3.9 hours per month**. That's more than **500% faster!**

This not only saves your analysts time, allowing them more time for other important aspects of their job, but also translates into hard dollar savings for your company. Based on an annual salary of \$65,000, your organization can **save \$7,433 per analyst**. Multiply that by 5 to 10 analysts and the savings increases to **\$37,165 - \$74,330 per year**.

TelView also offers you access to powerful tools not found on carrier and PUC sites:

- Daily Tariff Transmittal Alerts that notify you of all the new tariff information filed
- Customizable Tariff Tracker that automatically updates you of changes for specific tariffs
- Historical tariff data for invoice auditing, more accurate benchmarking and trending analysis
- Powerful search and bookmarking features — easily query within one document, across several documents or the entire library
