Impeller is clogged	2 •	<u> </u>	<u> </u>	Ľ	ă	<u>т</u>	P	Sł	Σ	ł	
Impeller is damaged		•	•	•						t	
Incorrect impeller or impeller diameter			•	•						t	
Speed is too slow	•	•	•							t	
Too much air trapped in fluid	•	•	•	٠						t	
Insufficient NPSH available	٠	•	•			•			•	I	
System head is too high											
Closed or clogged suction/discharge valves	٠	•	•			•				ļ	
Pump has lost prime, or not primed	•	•	•	•						4	
Incorrect suction piping	•	•	•							ļ	
Rotation incorrect		•					•			4	
Incorrectly assembled pump		<u> </u>	•	•	•	•		•	•	┨	
Instruments give inaccurate readings Suction line has air leak		-	•	•		<u> </u>		-		┨	
Impeller is broken, or has bent vane				•	•				-	ł	
Impeller is broken, of has bent varie					•	•			•	ł	
Improper coupling lubrication					•	•				t	
Coupling is out of balance					•	•			•	t	
Not enough lubrication					•					t	
Lubricant is contaminated					•					1	
Lubricant is not sufficiently cooled					•					1	
High suction pressure					•				•		
Shaft is misaligned					•	•			•	1	
Shaft deflection is excessive					•	•			•	4	
Shaft and/or shaft sleeve is worn		-						•	•	ł	
Radial loads and/or axial thrust higher than bearing rating		-			•				•	╂	
Bearing improperly installed Bearing failure		-			•	•			•	ł	
Pump is experiencing run out					•	•	•	•	•	t	
Pump is run dry									•	t	
Operating speed is too close to system's natural frequency						•				t	
Improperly installed baseplate					•	•			•	1	
Pump and/or driver are not properly secured to baseplate					•	•			•	1	
Improperly anchored piping					٠	•			٠	I	
Liquid specific gravity higher than spec'd					•		•		•	1	
Liquid viscosity higher than spec'd					•		•		•	1	
Liquid contains chemicals not spec'd										4	
Liquid contains higher solids concentration than spec'd										4	
Seal faces overheating									•		
Insufficient seal flush at seal faces Seals installed incorrectly									•		
Improperly adjusted packing gland							•	•	-	ł	
improperty aujusted packing gland		-						•		ł	
Improperly installed packing										UP.
