**OmniComm Systems, Inc. Announces Major New Release of TrialMaster® EDC**

*Innovation and Interoperability is the Focus of Version 4.2*

**Ft. Lauderdale, FL, December 30, 2013** — OmniComm Systems, Inc (OTC: OMCM), today announced the production availability of Version 4.2 of TrialMaster, its flagship product for Electronic Data Capture (EDC). This new release includes hundreds of innovative productivity and functionality enhancements, including additional features for auto-redaction for faster and more efficient centralized and risked-based monitoring, and major new features for exporting data utilizing OmniComm's award winning Export Utility.

"This is going to be a significant release for the industry." said Kuno van der Post, SVP of Business Development, "The industry is changing rapidly with new regulations and guidance being released by the FDA. OmniComm has set itself apart by releasing new technology that not only accommodates these changes, but allows our customers to capitalize on the benefits from them. Moreover, our significant investment in R&D is paying off with our all in-house development team delivering this significant new release within the promised timeframe and budget."

Within three years, companies will be required by the FDA to provide their final datasets in Study Data Tabulation Model (SDTM) format. TrialMaster 4.2 has automated the mapping and transposition tools required to perform this work. "The return on investment for our customers is very compelling" said Keith Howells, SVP of Product Development. "For example, our fully automated SDTM data export utility means that within 24 hours of database lock you can have your data in SDTM format. This saves our clients significant amounts of time and money per study."

TrialMaster 4.2 has also been engineered for high performance and stability. It is built on the latest Microsoft technology stack and supports the most modern and fastest browsers, including Internet Explorer 11, Firefox and Chrome. This means the product can support the largest and most complex clinical trials, while retaining its legendary ease of use.

"The focus of this release is clearly on innovation, but a significant amount of work has also gone into this release to ensure stability and optimal performance. There are a large number of stability and productivity enhancements that may not make headlines, but offer enhanced value to our customers. A
