

GSX Solutions' Full Service Tracking Slashes Exchange Server Management Costs

New advanced role-based approach enables GSX Monitor & Analyzer to pinpoint delivery issues in multi-server environments

Orchard Park, NY – November 28, 2012 — [GSX Solutions](http://www.gsx.com) [www.gsx.com], the global leader in proactive, consolidated monitoring and reporting of enterprise collaboration environments, including [Microsoft Exchange](#), [Microsoft SharePoint](#), BlackBerry Enterprise Server ([BES](#)) and [IBM Notes](#), today announced new advanced role-based monitoring capabilities for GSX Monitor & Analyzer. The latest enhancements pinpoint delivery issues in multi-server Exchange environments at a fraction of the cost of Quest's Exchange solution.

“Our role-based full service tracking is a significant advance in our comprehensive and cost-effective Exchange monitoring capabilities,” said Antoine Leboyer, CEO of GSX Solutions. “You can now identify emerging issues more quickly than ever and fix them more quickly as well, by precisely pinpointing their source.”

The latest GSX Monitor & Analyzer enhancements include:

- Advanced server management via full service tracking.
- Advanced role management that pinpoints levels of service delivery on multiple servers.
- Performance tracking for VIP users by monitoring specific mailboxes in various databases.
- An enhanced Environment Health view makes it easy to see which roles are underperforming, which servers have recurring issues, and which servers are getting the heaviest use so that you can balance loads accordingly.

By continually interacting with your system as a user with mail routing scenarios and other tests, GSX automatically identifies emerging issues and alerts you to take corrective action.

The latest GSX Monitor & Analyzer available for immediate download

The latest GSX Monitor & Analyzer with role-based full service tracking is available for immediate download, [more information available here](#).
