GSX Analyzer

Watch and manage your collaborative, messaging and mobile environments

GSX Analyzer

Lotus Domino - Sametime - Traveler – Quickr
BES - Microsoft Exchange - Microsoft SharePoint

GSX Monitor & Analyzer is a powerful and intuitive solution that allows IT managers and administrators to proactively manage the entire collaboration environment of their organization.

GSX Analyzer extends the powerful functionality of **GSX Monitor** by enabling you to create extensive automated reports based on the results, statistics and user perspective collected by **GSX Monitor**.

GSX Analyzer uses the data captured by **GSX Monitor** to generate a range of Trend Reports and performance metrics that help you to understand the usage and performance of your servers. By highlighting changes and patterns, the reports enable you to pinpoint potential problems and prioritize them for attention before your service is impacted. The extensive reporting features allow you to identify trends, manage capacity requirements, forecast and understand the overall health of your collaborative environment. You can generate consolidated, consistent reports for all the components in your infrastructure regardless of technology.

GSX Analyzer includes a wide range of pre-configured report templates that you can use as they are or customize them to align with your organization's specific requirements.

BENEFITS

- Identify and understand key trends and performance metrics

- Manage capacity, forecast and ensure maximum efficiency with minimum overhead

- Check the overall health of your messaging, mobile and collaborative environments

- Keep track of your Key Performance Indicators (KPI) and your Service Level Agreements (SLA) easily

GSX Analyzer Profiles

This feature enables administrators to filter, organize, manage and distribute information. Profiles ensure that the right information is shared with the right people in a secure and structured manner.

Profiles can be used to filter information by company, by customer, by location, by server or by any other user-defined "tag".

You can share Trend Report templates across all your profiles. You can also disable obsolete profiles, while still retaining all the reports associated with that profile.

## GSX Analyzer Environmental Health

This feature provides an overview of the health of your entire collaborative environment. Use Environmental Health to compare the performance of SLAs and KPIs across all the servers in your environment. With Environmental Health Reports you can instantly and easily compare key metrics across all of your servers. This means that you can rapidly identify issues with servers and prioritize them for attention.

GSX Analyzer Trend Reports

This feature enables administrators to track the performance of selected statistics over a period of time. Trend Reports can be created on demand or scheduled and delivered automatically to one or more recipients, to an FTP server or a local folder. Trend Reports highlight changes and patterns, helping administrators and managers to understand the past performance of the servers and services.

In addition to understanding past performance, you can also use Trend Reports to predict future performance.

GSX Analyzer's powerful forecasting feature eliminates the need for manual operations and enables you to plan future capacity requirements. Administrators and IT managers can identify potential future problems and take action proactively.
