GSX Monitor is IBM LotusLive ready

Manage and report on all of your communication and collaboration servers whether they are on premises or in the Cloud

Orlando, FL – 31 Jan 2011: GSX Solutions, a leading provider of monitoring and administration solutions for IBM collaboration software, Blackberry Enterprise Server and Microsoft Exchange, today announced that GSX Monitor can now monitor of the availability of LotusLive servers.

GSX Monitor is used to provide consistent metrics on quality of service delivered to customers regardless of whether the servers managed are on premise, in the cloud or a hybrid deployment. This offering is a logical extension of GSX service monitoring capabilities, with no server code required.

Monitor seamlessly integrates with GSX Analyzer for automated and consolidated reporting on the components of your collaboration platform. It is focused on service availability delivered to end users rather than just the server. Critical KPIs would be Mail Routing, Data Base Response Time and Replication Management.

"It is clear that IBM is actively working with its ecosystems of partners and customers to enhance and develop solutions for LotusLive," said Antoine Leboyer, CEO of GSX. "This announcement is another example of the opportunities that LotusLive represents for us and the wealth of value added by solutions around LotusLive."

Eileen Fitzgerald, GSX Vice-President of Product Management, agrees: "We are thrilled to be able to collaborate with IBM on this project. It extends the power of our monitoring and reporting solution, and offers customers the opportunity to have one consolidated tool for ALL the components of their collaboration portfolio, now including LotusLive."
