Answers Now™

INTERMAP TECHNOLOGIES®

Location-Based Answers Now

The Big Data Challenge

As businesses and governments increasingly recognize the importance of location-based intelligence, they face a common challenge: The cost and complexity of geospatial technology and big data – and the ability to manage it – is often out of reach. When faced with a location-based intelligence dilemma, organizations often don't have the time, budget, or expertise to bring everything together and conclude on the answer.

Areas of Expertise:

Our product offerings can be divided into two categories: software and services.

Orion Software™

Orion provides answers now from spatial data for business users, analysts, and executives. By merging business intelligence and GIS functions, Orion provides benefits to both business and technical users.

Digital Elevation Model (DEM) Services

Intermap provides services and data that build or enhance the foundation of any spatial data infrastructure. A consistent elevation dataset is the key to spatial analytics.

Solutions Powered by a 100-Year Legacy

With a 100-year legacy in world-class data acquisitions, Intermap is also a leading provider of location-based intelligence and geospatial solutions. Intermap delivers expertise in geospatial analytics and software solutions that are unparalleled in the industry. The company solves big data and spatial challenges using unique software and one-of-a-kind services that provide an integrated stage upon which scalable geospatial solutions are delivered.

Specific Offerings for Your Challenges

Orion Software™

Orion is a cloud-based software platform, delivering easy-to-use analysis and presentation tools that give business analysts the intelligence they need. Orion caters to two key users: Analysts who aren't GIS specialists but need answers from spatial data, and GIS experts who have a strong geospatial knowledge but need to manipulate volumes of data to provide in-depth reporting.

Software Services

Intermap offers software services that include:

- **Intelligent Query (IQ) Development:** Orion provides standard analytic work flows that can be customized for a particular organization's needs.
- **Integration:** Intermap professional service teams assist customers with implementation and integration of our software with existing systems.
- **Training:** Intermap training teams work with customer staff to make them self-sufficient in system administration and operation.

InsitePro™

InsitePro is a cloud-based software solution that brings together all the necessary data and analytics for underwriting natural catastrophe risk, anywhere in the world.

DEM Services

Intermap provides services and data that build or enhance the foundation of any spatial data infrastructure.

- **Acquisition:** Collecting IFSAR, LiDAR, and satellite imagery elevation data – or any other third-party data – for large or small areas.
- **DEM Creation:** Aggregating customer data, IFSAR, LiDAR, and/or satellite imagery to build a digital elevation model that meets customer specifications.
- **Elevation Data:** For specific project needs or to fill in gaps as part of a homogenous DEM, Intermap offers its suite of NEXTMap® products.
- **Geospatial Audit:** Intermap will analyze your business requirements and offer cost-effective solutions.
