EMT Link™

Protection That's Personal

I was too sick to get up. With one press of my transmitter, I was connected to a SafetyCare operator who reassured me until an ambulance arrived.

SafetyCare is at the forefront of the life safety and medical alert industry with advanced technologies and a 24/7 monitoring response center staffed by certified EMTs.

The "SafetyCare Promise" is at-home safety through around-the-clock monitoring. To accomplish this goal, we built a multi-million dollar, world-class central station and staffed it with certified EMTs. We developed the most reliable and advanced suite of Personal Emergency Response System products and services. Then, we packaged it all through a nationwide Authorized Partner network of the industry's leading customer and technical service professionals. Through our technology, SafetyCare is just a button press away.

SafetyCare

EMT Link™ is a Personal Emergency Response System (PERS) that enables 24-hour in-home safety through manual or automatic connection and alerts to the SafetyCare Response Center staffed around the clock by certified EMTs. The system features:

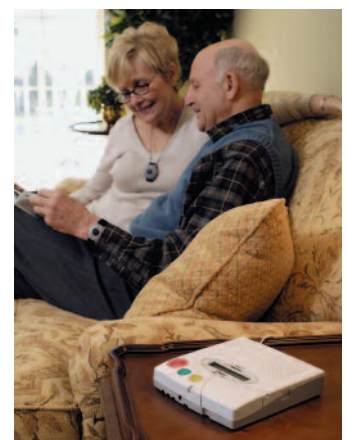

- An ultra-reliable emergency reporting console with two-way hands-free voice capability and three buttons for a variety of home safety functions as well as false alarm cancellation.
- A back-up battery to keep system operating during power outages.
- A choice of wrist or pendant transmitters for users to wear and instantly signal a personal emergency with the press of a button. Each is waterproof for wearing in the shower, operates via a long-life five-year battery, and has a 1,000+ foot line-of-sight range.
- Built-in system diagnostics to alert users to telephone line failure, power outages, or low battery life.
- The console supports additional wireless transmitters for added safety functions, including door/window intrusion detection and smoke detection.

In support of EMT Link™, the SafetyCare Response Center is one of the nation's best-equipped and well-staffed facilities.

The SafetyCare Response Center

- Is staffed around-the-clock by certified EMTs.
- Is a UL-Listed central station authorized to monitor UL residential and commercial burglary and fire alarm systems. SafetyCare has listings for both central station operation and site automation systems.
- Maintains a record of all alarms and responses. All equipment used in the station, including the computer network, is UL certified.

- Provides the highest quality two-way voice verification for assured medical alert and emergency monitoring services and false alarm reduction.
- Is powered by a world-class automation platform and two fail-safe redundant systems, including back-up hardware and software for every piece of essential technology.
- Is recognized by *ComputerWorld* magazine for its high-tech infrastructure.
- Developed MASweb Authorized Partner services to enable direct linkage for accessing records, reports, and member data.
- Created MASweb Member services that allow easy viewing and updating of account details and medical profiles.
- Offers unique messaging services for Authorized Partners to communicate with customers via email, text messages, and SMS communications.
- Provides value-added services for qualified Authorized Partners, including professional business call forwarding/answering service and customer billing.
- Features PERS medical alert services, including two-way voice and fire/smoke alarm monitoring.
- Developed new monitoring services such as "latchkey" alerts to let working parents know that their children have arrived home safe from school. Program also includes environmental monitoring of facilities.
- Offers remote video and other add-on monitoring services.
- Instituted part-time and back-up monitoring services for businesses with their own monitoring centers.
- Provides alarm testing during demonstrations and installations.
