

Long Lasting and High Strength

Floating marine log camels (pipe camels) provide protection of vessels, wharves and piers from damage from vessel contact. Log camels use reinforced composite material for strength. Composite log camels distribute berthing loads across multiple fender piles and prevent overloading and damage to individual piles. The Fiberglass Reinforced Polymer (FRP) composite construction delivers the performance advantages needed for waterfront infrastructure - no maintenance, corrosion resistance, and long life.

Performance

Advantages:

- No maintenance
- Corrosion resistant to sea water and chemicals
- Long lasting

Product Details:

- Lengths to 70 ft
- Diameters to 48 in
- Seamless pipe
- Sealed ends

Superior Materials & Design Features

- Range of diameters and lengths
- Design flexibility for size and freeboard
- Stainless 316 hardware
- Hawse pipe for mooring with standard 3/4" chain
