

## WILSON ANCHOR BOLT SLEEVES

### Applications

**Basic Use:** The Wilson Anchor Bolt Sleeve is used as an in-place form to provide a grout pocket around an anchor bolt (Fig. 1 and 3) and is used to form a pocket into which a bolt may be grouted (Fig. 2). Also may be used where metal pipe is objectionable due to rusting or cost. Use in food processing areas is not a problem due to the inert polyethylene.

**Limitations:** The Wilson Anchor Bolt Sleeve is not recommended where high heat is used, such as inside an oven.
