

# Choosing the right biocide is important

Solving bacteria and fungus problems in fuel is serious business.  
It's important to make the **right choice**. Here's what you need to know.

BIOCIDES TREATMENT		BELLCIDE	ISOTHIAZOLINONE (i.e. Kathon)	BORON-BASED (i.e. Bio-Bor)	CARBAMATE (i.e. Priocide)	WATER ABSORBER (i.e. Star-tron)
	<b>Contact time to a complete kill</b> (how long does it take to work?)					<b>WILL NOT KILL MICROBES</b>
	<b>Effectiveness after 1 week</b> (is it still working after one week?)					<b>WILL NOT KILL MICROBES</b>
	<b>Effectiveness after 4 weeks</b> (is it still working after four weeks?)					<b>WILL NOT KILL MICROBES</b>
	<b>Sensitivity to pH</b> (do microbial acids in the fuel keep it from working?)					<b>WILL NOT KILL MICROBES</b>

= Best Choice

= Acceptable Choice
