

THE SOLUTION FOR ETHANOL PROBLEMS

MIX-I-GO

A MULTI-PURPOSE TREATMENT FOR GASOLINE AND ETHANOL BLENDS

MIX-I-GO is specially formulated to solve gas and ethanol-related related problems in gasoline engines for cars, boats, trucks, generators, tractors, recreational vehicles, lawn mowers and motorcycles. **MIX-I-GO** is a balanced compound of ashless organic materials which are completely soluble in gasoline and ethanol blends, and can be used in ALL gasoline engines, large and small. **MIX-I-GO** is especially effective at solving common problems seen with the use of ethanol blends.

THE PROBLEM WITH ETHANOL BLENDS

Due to government mandates, it's almost impossible to find gasoline without at least 10-15% ethanol content. Ethanol blends are great for the environment but cause problems for modern vehicles and drivers, including

- Loss of gas mileage

Fuel prices are more expensive than ever, yet drivers find their gas mileage dropping when they put ethanol in their vehicle. Ethanol blends have less energy value than pure gasoline, and less energy means less mileage for your vehicle. Mileage drops of up to 10% or more are not uncommon for users of E10 and E15.

- Rough engine running
- Water attraction and phase separation

Ethanol pulls water from the atmosphere, which collects in the ethanol fuel and causes phase separation — the separation of the ethanol from the gasoline, with a resulting loss of octane in the fuel. This poor-quality separated fuel causes rough running and poor engine performance.

- Dissolving of seals and fuel system components.

Ethanol dissolves the resins in the rubber and plastic seals in the fuel system and other parts of the engine. These resins are carried to other parts of the engine where they leave mileage- and performance-robbing deposits on fuel injectors and other parts.

- Damage to 2-cycle and small engine equipment

Ethanol blends also damage 2-cycle engines and small equipment by dissolving fuel lines and seals and interfering with vital fuel-oil lubrication.

OTHER GASOLINE PROBLEMS

Increased world demand for gasoline and oil means today's gasoline blends do not burn as cleanly as the higher-quality gasolines of the past. The results are more carbon deposits in the combustion chamber and on fuel injectors. The injector deposits can change the fuel spray from a fine mist to a dribbling stream that does not combust as fully in the combustion chamber. The result? Lower mileage, higher emissions and more combustion chamber deposits (which increase the octane requirement of the engine).

THE SOLUTION FOR ETHANOL BLENDS

MIX-I-GO multi-function gas treatment solves gasoline and ethanol fuel-related problems with a detergent, lubricant, surfactant blend, deposit control agent and combustion modifier.

BENEFITS IN GASOLINE AND ETHANOL BLENDS: BETTER MILEAGE AND PERFORMANCE

- May improve mileage by 12% or more
- Improves compression and horsepower

The combination of **MIX-I-GO's** superior combustion improvers and ethanol-enhancing ingredients help prevent the mileage-robbing effects of ethanol.

COMPLETE CLEANING AND DEPOSIT CONTROL

- Removes carbon, varnish and gum deposits
- Cleans fuel injectors and carburetors
- Eliminates sticky valves and piston rings

MIX-I-GO's detergent and deposit control agents will clean the injectors, entire fuel delivery system and combustion chamber, to restore power and performance to your vehicle.

LUBRICATION AND PROTECTION

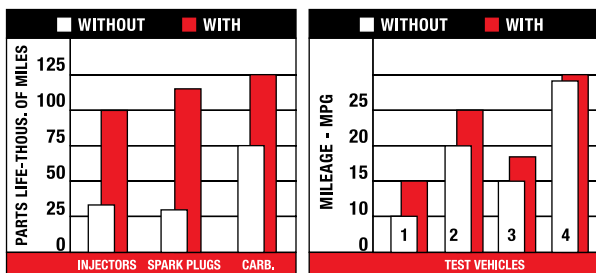

- Provides superior upper cylinder lubrication
- Coats valves, valve seats, lower exhaust valve guides and upper piston rings
- Protects important parts from ethanol damage
- Prevents corrosion in fuel tanks and exhaust systems

MIX-I-GO's super lubricant coats the entire fuel delivery system to protect these parts against corrosive ethanol solvency and prevent wear and corrosion. It also lubricates the upper cylinder area, extending engine life, reducing wear and protecting critical engine parts.

COMBUSTION ENHANCEMENT

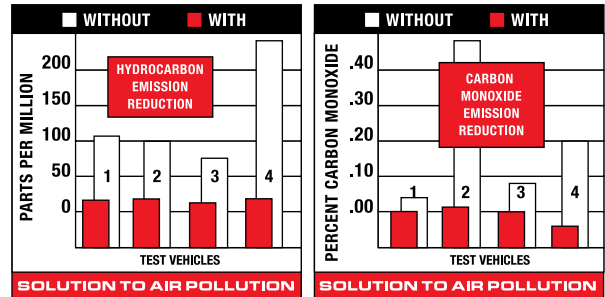

- Improves fuel consumption and mileage
- Lowers emissions and improves performance
- Promotes smoother running engines

The combustion improvers in **MIX-I-GO** minimize pre-oxidation of the fuel in the combustion chamber prior to the spark igniting the fuel mixture. This increases fuel combustion efficiency and horsepower because more fuel is now available for burning at spark ignition. When used as recommended in regular unleaded gasoline, **MIX-I-GO** outperforms premium unleaded fuel in most engines.

MOISTURE ELIMINATION

- Combats water accumulation inherent to ethanol blends
- Removes water caused by condensation and prevents corrosion
- Protects 2-cycle engines

MIX-I-GO contains powerful moisture eliminators that remove free water from the fuel system. This is especially important for ethanol blends which attract water from the environment, causing ethanol separation from the gasoline and stripping fuel quality and octane value. **MIX-I-GO** keeps the droplets in suspension and removes the water, slowing down the fuel burn rate. The result is more complete combustion and enhanced removal of carbon deposits from the combustion chamber.

Water control is also vitally important in 2-cycle engines, where water attraction from ethanol blends can prevent the lubricating oil mixed in the fuel from properly bonding to engine surfaces and providing proper lubrication. **MIX-I-GO** prevents ethanol damage in 2-cycle equipment!

FUEL LIFE PRESERVATION

MIX-I-GO's water removers harmful phase separation in ethanol blends, while its anti-oxidants and metal deactivators prevent gasoline stratification to optimize the fuel storage life of both gasoline and ethanol blends.

PERFORMANCE THAT COUNTS

Cities and municipalities have trusted **MIX-I-GO** for decades to reduce their fleet emissions by 50-90% and cut their maintenance costs. Vehicles from police cruisers to family cars have found that **MIX-I-GO** in regular unleaded fuel will outperform their premium unleaded fuel.

DOSAGE

Use one 1 oz **MIX-I-GO** for every 10 gallons of fuel to be treated. For initial treatment, use a double dosage of **MIX-I-GO** to remove build-up.

MIX-I-GO is EPA registered and will not void manufacturers' warranties.

So use it in confidence!
