

**PowerBridge**

**PowerBridge is CRIF Select's solution for providing core system connectivity.**

Designed to streamline the credit union loan origination processing workflow, PowerBridge™ delivers speed, accuracy and efficiency by eliminating the need to manually enter loan applications and automating the entire loan data entry process.

PowerBridge is a technology solution that electronically connects CRIF Select's lending systems to your core processing systems, creating a real-time data transmission channel. Further adding to its convenience and ease of use, PowerBridge is accessed using CRIF SelectLink, our suite of online lending tools.

## COST-EFFECTIVE BUSINESS PROCESS OUTSOURCING

YOUR TOOL TO STAY CONNECTED

PowerBridge is used by credit unions for everything from real-time membership verification to creating new member accounts in a credit union's core systems.

### How Does it Work?

PowerBridge is a technology solution that allows CRIF Select's credit union partners to upload loan data from the CRIF Select lending system into their credit union host system, adding efficiency to your credit union's loan origination processing workflow, and saving you time and money. By completely uploading your indirect or direct loans from the CRIF Select system to your core system, you eliminate the need for manual entry of loan data. And, to further streamline your operations, you can access the automated upload process to create new member accounts or add new loans to existing member accounts.

### Benefits

With this type of connectivity in place, the sky's the limit in terms of what credit unions can accomplish in the name of productivity and efficiency. From quicker, more accurate loan booking and processing to deeper credit decisioning and reporting to researching member accounts and providing cross-selling opportunities - all of this can be accomplished with PowerBridge. With PowerBridge, you get the following benefits:

- Real-time membership validation
- Cross-selling opportunities
- Submission/decisioning of direct loan applicants
- Enhanced "host level" reporting and data analysis
- Deeper decisioning
- Internal credit bureau pulling and parsing
- Web-based access to pre-loaded loan data
- Connectivity to outside vendors

### Technology

PowerBridge is built on the latest Microsoft technologies and takes advantage of 128 bit SSL key encryption standards. PowerBridge is a Microsoft .NET application using Web Services. By using Web Services, there is no need for large software installs or downloads to get up and running. For most core systems, a small plug-in is all that's needed to make the connection and start passing data.
