

FOR IMMEDIATE RELEASE

Interneer Releases Interneer Intellect 7, Automates Creation of Business Processes Required by Cloud Applications and Mobile Apps

Unleashes the power of cloud applications and mobile apps; create, connect and improve business processes throughout the enterprise; more than 50 new feature enhancements

Los Angeles, CA, April 1, 2013 — [Interneer, Inc.](#), a leading provider of [SaaS](#) Business Process Management (BPM) software for process automation applications and smart mobile apps, today announced availability of [Interneer Intellect 7 Platform](#), a major upgrade to its next generation BPM software platform designed for automating business-critical processes such as those associated with cloud applications and mobile apps. Interneer Intellect 7, which provides rapid, no-coding development with real-time reporting and dashboard applications, adds more than 50 [feature enhancements](#) to the product since its [6.5 update](#) in April 2010. In addition to its Intellect 7 upgrade, the company also released [Intellect MobileApps](#) for iPad.

“With Interneer Intellect 7, business users in small businesses to large enterprises can benefit from the power of cloud applications and mobile apps to connect and improve business processes throughout the enterprise,” said [Romeo Elias](#), Founder, President and CEO of Interneer. “Interneer Intellect 7 is designed for mobility, connectivity, and agility. This release extends the platform to enable the business user to develop mobile apps without any programming, unlocking new possibilities that far surpass anything available in the market today.”

Interneer Intellect 7 drives transparent participation and open collaboration among teams, especially between business users and IT professionals. With Interneer Intellect 7, [business users](#) can easily define, configure, optimize and automate business processes and workflow around common, but critically important tasks or applications. Intellect MobileApps extends this capability to mobile devices such as the iPad.

For example, business users can easily automate processes, such as “submit expense report”, “create contract and proposal”, “submit vacation request”, and these processes can now be performed using an iPad. Users can also create templates, collaborate on documents, integrate forms, databases, create reports, and much more. Applications using Intellect 7 and Intellect MobileApps require zero programming from initial design to deployment.

Once processes are defined and established, Interneer Intellect 7 intuitively tracks and monitors progress on a central dashboard, creating a single central place to manage processes and workflow; executive dashboard views enable management to easily identify late work, pending approval, and better allocate resources.

Interneer Intellect 7 new features include:

- Support for all browsers – Internet Explorer (IE), Safari, Firefox, and Chrome
- PDF Integration – merge data from Interneer Intellect 7 into pre-defined PDF forms, such as IRS tax forms, government applications, etc.
- Extended reporting and dashboard options
- Advanced Password Policy Management and Security
- Microsoft Word Integration – control access to word documents, markups, reject/approve, etc.

About Interneer

Interneer is a leading provider of SaaS Business Process Management (BPM) software for process automation applications and smart mobile apps designed for mobility, connectivity, and agility. With Interneer, companies can deploy affordable, easy to use BPM software for automating business processes and workflows with rapid implementation, as well as develop smart MobileApps without any programming required. The intuitive drag and drop user interface is user friendly, designed for business users and requires no programming. Interneer Intellect 7 is available through SaaS per seat licensing or can be installed on premise. Interneer has hundreds of customers including Bose, Jacobs Engineering, and Host Hotels in markets including construction, manufacturing, energy, and the public sector.
