Operations and Algebraic Thinking 3.0A				
GRAD	DE 3 STANDARDS / DESCRIPTION	SADLIER CON	MMON CORE PROGRESS MATHEMATICS, GRADE 3	
Represent and solve problems involving multiplication and division.				
1.	Interpret products of whole numbers, e.g., interpret 5 × 7 as the total number of objects in 5 groups of 7 objects each. For example, describe a context in which a total number of objects can be expressed as 5 × 7.	Lesson 1	Interpret Products of Whole Numbers —pp. 10–17	
2.	Interpret whole-number quotients of whole numbers, e.g., interpret $56 \div 8$ as the number of objects in each share when 56 objects are partitioned equally into 8 shares, or as a number of shares when 56 objects are partitioned into equal shares of 8 objects each. For example, describe a context in which a number of shares or a number of groups can be expressed as $56 \div 8$.	Lesson 2	Interpret Quotients of Whole Numbers —pp. 18–26	
3.	Use multiplication and division within 100 to solve word problems in situations involving equal groups,	Lesson 3	Problem Solving: Multiplication/Division and Equal Groups—pp. 26–33	
	arrays, and measurement quantities, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem.	Lesson 4	Problem Solving: Multiplication/Division and Arrays—pp. 34–41	
		Lesson 32	Problem Solving: Measurement—pp. 288–295	
4.	Determine the unknown whole number in a multiplication or division equation relating three whole numbers.	Lesson 5	Find Unknown Numbers in Multiplication and Division Equations—pp. 42–49	
	For example, determine the unknown number that makes the equation true in each of the equations $8 \times ? = 48$, $5 = \square \div 3$, $6 \times 6 = ?$.			
Understand properties of multiplication and the relationship between multiplication and division.				
5.	Apply properties of operations as strategies to multiply and divide. ²	Lesson 6	Apply Commutative and Associative Properties to Multiply—pp. 50–57	
	Examples: If $6 \times 4 = 24$ is known, then $4 \times 6 = 24$ is also known. (Commutative property of multiplication.) $3 \times 5 \times 2$ can be found by $3 \times 5 = 15$, then $15 \times 2 = 30$, or by $5 \times 2 = 10$, then $3 \times 10 = 30$. (Associative property of multiplication.) Knowing that $8 \times 5 = 40$ and $8 \times 2 = 16$, one can find 8×7 as $8 \times (5 + 2) = (8 \times 5) + (8 \times 2) = 40 + 16$ = 56. (Distributive property.)	Lesson 7	Apply the Distributive Property to Multiply — pp. 58–65	
	² Students need not use formal terms for these properties.			

Operations and Algebraic Thinking 3.0A				
GRADE 3 STANDARDS / DESCRIPTION			SADLIER COMMON CORE PROGRESS MATHEMATICS, GRADE 3	
6.	Understand division as an unknown-factor problem. For example, find 32 ÷ 8 by finding the number that makes 32 when multiplied by 8.		Lesson 8	Divide by Finding an Unknown Factor —pp. 66–73
Multiply and divide within 100.				
7.	Fluently multiply and divide within 100, using strategies such as the relationship between multiplication and division (e.g., knowing that $8 \times 5 =$ 40, one knows $40 \div 5 = 8$) or properties of operations. By the end of Grade 3, know from memory all products of two one-digit numbers.		Lesson 9	Multiply and Divide Fluently within 100—pp. 80–87
Solve problems involving the four operations, and identify and explain patterns in arithmetic.				
8.	Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding. ³		Lesson 10	Problem Solving: Two-Step Problems—pp. 88–95
			Lesson 11	Problem Solving: Use Equations—pp. 96–103
	³ This standard is limited to problems posed with whole numbers and having whole-number answers; students should know how to perform operations in the conventional order when there are no parentheses to specify a particular order (Order of Operations).			
9.	Identify arithmetic patterns (including patterns in the addition table or multiplication table), and explain them using properties of operations.		Lesson 12	Identify and Explain Arithmetic Patterns —pp. 104–111
	For example, observe that 4 times a number is always even, and explain why 4 times a number can be decomposed into two equal addends.			
Number and Operations in Base Ten 3.NBT				
GRADE 3 STANDARDS / DESCRIPTION			SADLIER COM	MON CORE PROGRESS MATHEMATICS, GRADE 3
Use place value understanding and properties of operations to perform multi-digit arithmetic.				
1.	Use place value understanding to round whole numbers to the nearest 10 or 100.		Lesson 13	Round Whole Numbers to the Nearest 10 or 100—pp. 112–119
2.	Fluently add and subtract within 1000 using strategies and algorithms based on place value, properties of operations, and/or the relationship between addition and subtraction.		Lesson 14	Add and Subtract Fluently within 1000—pp. 120–127

3.NBT

Number and Operations in Base Ten

GRADE 3 STANDARDS / DESCRIPTION

3. Multiply one-digit whole numbers by multiples of 10 in the range 10-90 (e.g., 9×80 , 5×60) using strategies based on place value and properties of operations.

Number and Operations—Fractions

GRADE 3 STANDARDS / DESCRIPTION

Develop understanding of fractions as numbers.

- 1. Understand a fraction 1/b as the quantity formed by 1 part when a whole is partitioned into b equal parts; understand a fraction a/b as the quantity formed by a parts of size 1/b.
- 2. Understand a fraction as a number on the number line; represent fractions on a number line diagram.
 - a. Represent a fraction 1/b on a number line diagram by defining the interval from 0 to 1 as the whole and partitioning it into b equal parts. Recognize that each part has size 1/b and that the endpoint of the part based at 0 locates the number 1/b on the number line.
 - b. Represent a fraction *a/b* on a number line diagram by marking off a lengths 1/*b* from 0. Recognize that the resulting interval has size *a/b* and that its endpoint locates the number *a/b* on the number line.
- 3. Explain equivalence of fractions in special cases, and compare fractions by reasoning about their size.
 - a. Understand two fractions as equivalent (equal) if they are the same size, or the same point on a number line.
 - b. Recognize and generate simple equivalent fractions, e.g., 1/2 = 2/4, 4/6 = 2/3). Explain why the fractions are equivalent, e.g., by using a visual fraction model.
 - c. Express whole numbers as fractions, and recognize fractions that are equivalent to whole numbers.

Lesson 15 Multiply One-Digit Whole Numbers by Multiples of 10—pp. 128–135

3.NF

SADLIER COMMON CORE PROGRESS MATHEMATICS, GRADE 3

Lesson 16	Understand Unit Fractions as Quantities —pp. 142–149
Lesson 17	Understand Fractions as Quantities —pp. 150–157
Lesson 18	Understand Fractions on the Number Line— pp. 158–165
Lesson 18	Understand Fractions on the Number Line— pp. 158–165
Lesson 19	Understand Equivalent Fractions —pp. 166– 173
Lesson 20	Write Equivalent Fractions—pp. 174–181
Lesson 21	Relate Whole Numbers and Fractions —pp. 182–189

3.NF

Number and Operations—Fractions

GRADE 3 STANDARDS / DESCRIPTION

- continued from previous page -

that 6/1 = 6; locate 4/4 and 1 at the same point of a number line diagram.

d. Compare two fractions with the same numerator or the same denominator by reasoning about their size. Recognize that comparisons are valid only when the two fractions refer to the same whole. Record the results of comparisons with the symbols >, =, or <, and justify the conclusions, e.g., by using a visual fraction model.

Measurement and Data

GRADE 3 STANDARDS / DESCRIPTION

Solve problems involving measurement and estimation of intervals of time, liquid volumes, and masses of objects.

- Tell and write time to the nearest minute and measure 1. time intervals in minutes. Solve word problems involving addition and subtraction of time intervals in minutes, e.g., by representing the problem on a number line diagram.
- 2. Measure and estimate liquid volumes and masses of objects using standard units of grams (g), kilograms (kg), and liters (l).⁶ Add, subtract, multiply, or divide to solve one-step word problems involving masses or volumes that are given in the same units, e.g., by using drawings (such as a beaker with a measurement scale) to represent the problem.7

⁶Excludes compound units such as cm³ and finding the geometric volume of a container.

⁷ Excludes multiplicative comparison problems (problems involving notions of "times as much."

Represent and interpret data.

3. Draw a scaled picture graph and a scaled bar graph to represent a data set with several categories. Solve oneand two-step "how many more" and "how many less" problems using information presented in scaled bar graphs.

> For example, draw a bar graph in which each square in the bar graph might represent 5 pets.

190-197

Lesson 22

Lesson 23

Compare Fractions: Same Numerator—pp. 198-205

3.MD

SADLIER COMMON CORE PROGRESS MATHEMATICS, GRADE 3

Lesson 24 Problem Solving: Time-pp. 218-225

Lesson 25 Problem Solving: Volumes and Masses—pp. 226-233

Lesson 32 Problem Solving: Measurement—pp. 288–295

Draw Graphs to Represent Categorical Lesson 26 Data—pp. 234–241

Examples: Express 3 in the form 3 = 3/1; recognize

Compare Fractions: Same Denominator—pp.

3

Gra	de 3		
Me	easurement and Data		3.MD
GRADE 3 STANDARDS / DESCRIPTION		SADLIER COMMON CORE PROGRESS MATHEMATICS, GRADE 3	
4.	Generate measurement data by measuring lengths using rulers marked with halves and fourths of an inch. Show the data by making a line plot, where the horizontal scale is marked off in appropriate units— whole numbers, halves, or quarters.	Lesson 27	Generate and Graph Measurement Data—pp. 242–249
con	metric measurement: understand cepts of area and relate area to tiplication and to addition.		
5.	Recognize area as an attribute of plane figures and understand concepts of area measurement.		
	 A square with side length 1 unit, called "a unit square," is said to have "one square unit" of area, and can be used to measure area. 	Lesson 28	Understand Concepts of Area Measurement—pp. 256–263
	b. A plane figure which can be covered without gaps or overlaps by n unit squares is said to have an area of <i>n</i> square units.	Lesson 28	Understand Concepts of Area Measurement—pp. 256–263
6.	Measure areas by counting unit squares (square cm, square m, square in, square ft, and improvised units).	Lesson 28	Understand Concepts of Area Measurement—pp. 256–263
7.	Relate area to the operations of multiplication and addition.		
	a. Find the area of a rectangle with whole-number side lengths by tiling it, and show that the area is the same as would be found by multiplying the side lengths.	Lesson 29	Find Areas of Rectangles: Tile and Multiply— pp. 264–271
	b. Multiply side lengths to find areas of rectangles with whole-number side lengths in the context of solving real world and mathematical problems, and represent whole-number products as rectangular areas in mathematical reasoning.	Lesson 29	Find Areas of Rectangles: Tile and Multiply— pp. 264–271
	c. Use tiling to show in a concrete case that the area of a rectangle with whole-number side lengths a and $b + c$ is the sum of $a \times b$ and $a \times c$. Use area models to represent the distributive property in mathematical reasoning.	Lesson 30	Find Areas of Rectangles: Use the Distributive Property—pp. 272–279
		Lesson 32	Problem Solving: Measurement—pp. 288–295
	d. Recognize area as additive. Find areas of rectilinear figures by decomposing them into non-overlapping rectangles and adding the areas of the non-overlapping parts, applying this technique to solve real world problems.	Lesson 31	Find Areas: Decompose Figures into Rectangles—pp. 280–287
		Lesson 32	Problem Solving: Measurement—pp. 288–295

3

3.MD

Measurement and Data

GRADE 3 STANDARDS / DESCRIPTION

Geometric measurement: recognize perimeter as an attribute of plane figures and distinguish between linear and area measures.

 Solve real world and mathematical problems involving perimeters of polygons, including finding the perimeter given the side lengths, finding an unknown side length, and exhibiting rectangles with the same perimeter and different areas or with the same area and different perimeters.

Geometry

GRADE 3 STANDARDS / DESCRIPTION

Reason with shapes and their attributes.

- 1. Understand that shapes in different categories (e.g., rhombuses, rectangles, and others) may share attributes (e.g., having four sides), and that the shared attributes can define a larger category (e.g., quadrilaterals). Recognize rhombuses, rectangles, and squares as examples of quadrilaterals, and draw examples of quadrilaterals that do not belong to any of these subcategories.
- 2. Partition shapes into parts with equal areas. Express the area of each part as a unit fraction of the whole.

For example, partition a shape into 4 parts with equal area, and describe the area of each part as 1/4 of the area of the shape.

SADLIER COMMON CORE PROGRESS MATHEMATICS, GRADE 3

Lesson 33	Problem Solving: Perimeter—pp. 296–303
Lesson 34	Problem Solving: Compare Perimeter and Area—pp. 304–311

3.G

SADLIER COMMON CORE PROGRESS MATHEMATICS, GRADE 3

Lesson 35 Understand Shapes and Attributes—pp. 312– 319

Lesson 36 Partition Shapes to Make Equal Areas—pp. 320–327
