Domain: Ratios & Proportional Relationships

GRADE 6 STANDARE	O CODE / STANDARD	SADLIER CO	MMON CORE PROGRESS MATHEMATICS, GRADE 6
	erstand ratio concepts and use g to solve problems.		
MAFS.6.RP.1.1	Understand the concept of a ratio and use ratio language to describe a ratio relationship between two quantities. For example, "The ratio of wings to beaks in the bird house at the zoo was 2:1, because for every 2 wings there was 1 beak." "For every vote candidate A received, candidate C received nearly three votes."	Lesson 1	Understand Ratios and Unit Rates —pp. 10– 17
	<u>Cognitive Complexity</u> : Level 2: Basic Application of Skills & Concepts		
MAFS.6.RP.1.2	Understand the concept of a unit rate a/b associated with a ratio $a:b$ with $b \neq 0$, and use rate language in the context of a ratio relationship. For example, "This recipe has a ratio of 3 cups of flour to 4 cups of sugar, so there is $3/4$ cup of flour for each cup of sugar." "We paid \$75 for 15 hamburgers, which is a rate of \$5 per hamburger."	Lesson 1	Understand Ratios and Unit Rates —pp. 10– 17
	<u>Cognitive Complexity</u> : Level 2: Basic Application of Skills & Concepts		
MAFS.6.RP.1.3* (*amended standard)	Use ratio and rate reasoning to solve real- world and mathematical problems, e.g., by reasoning about tables of equivalent ratios, tape diagrams, double number line diagrams, or equations.		
	<u>Cognitive Complexity</u> : Level 2: Basic Application of Skills & Concepts		
	a. Make tables of equivalent ratios relating quantities with whole- number measurements, find missing	Lesson 2	Use Ratio Tables to Find Equivalent Ratios— pp. 18–25
	values in the tables, and plot the pairs of values on the coordinate plane. Use tables to compare ratios.	Lesson 3	Use Ratio Tables to Compare Ratios—pp. 26–33
		Lesson 8	Problem Solving: Ratios and Rates —pp. 66– 73
	b. Solve unit rate problems including	Lesson 4	Solve Unit Rate Problems—pp. 34–41
	those involving unit pricing and constant speed. For example, if it took 7 hours to mow 4 lawns, then at that rate, how many lawns could be mowed in 35 hours? At what rate were lawns being mowed?	Lesson 8	Problem Solving: Ratios and Rates —pp. 66– 73

Domain: Ratios & Proportional Relationships

GRADE 6 STANDARD CODE / STANDARD

- c. Find a percent of a quantity as a rate per 100 (e.g., 30% of a quantity means 30/100 times the quantity); solve problems involving finding the whole, given a part and the percent.
- d. Use ratio reasoning to convert measurement units; manipulate and transform units appropriately when multiplying or dividing quantities.
- e. Understand the concept of Pi as the ratio of the circumference of a circle to its diameter.

Domain:	The	Number	System
---------	-----	--------	--------

GRADE 6 STANDARD CODE / STANDARD

Cluster 1: Apply and extend previous understandings of multiplication and division to divide fractions by fractions. (MAJOR CLUSTER)

MAFS.6.NS.1.1 Interpret and compute quotients of fractions, and solve word problems involving division of fractions by fractions, e.g., by using visual fraction models and equations to represent the problem. For example, create a story context for $(2/3) \div$ (3/4) and use a visual fraction model to show the quotient; use the relationship between multiplication and division to explain that $(2/3) \div (3/4) = 8/9$ because 3/4 of 8/9 is 2/3. (In general, $(a/b) \div (c/d) = ad/bc$.) How much chocolate will each person get if 3 people share 1/2 lb of chocolate equally? How many 3/4-cup servings are in 2/3 of a cup of yogurt? How wide is a rectangular strip of land with length 3/4 mi and area 1/2 square mi?

> <u>Cognitive Complexity</u>: Level 2: Basic Application of Skills & Concepts

Divide Multi-digit Numbers—pp. 96–103

Lesson 11

numbers and f multiples.	Cluster 2: Compute fluently with multi-digit numbers and find common factors and multiples. (ADDITIONAL CLUSTER)			
MAFS.6.NS.2.2 Fluently divide multi-digit numbers using the standard algorithm.				
Cognitive Complexity: Level 1: Recall				

MAFS.6.NS.2.3	Fluently add, subtract, multiply, and divide multi-digit decimals using the standard algorithm for each operation.	Lesson 12	Add and Subtract Multi-digit Decimals—pp. 104–111
	<u>Cognitive Complexity</u> : Level 1: Recall	Lesson 13	Multiply and Divide Multi-digit Decimals— pp. 112–119
MAFS.6.NS.2.4	Find the greatest common factor of two whole numbers less than or equal to 100 and the least common multiple of two whole numbers less than or equal to 12. Use the distributive property to express a sum of two whole numbers 1–100 with a common factor as a multiple of a sum of two whole numbers with no common factor. For example, express $36 + 8$ as $4 (9 + 2)$.	Lesson 14	Find the Greatest Common Factor and Least Common Multiple—pp. 120–127
	<u>Cognitive Complexity</u> : Level 2: Basic Application of Skills & Concepts		

Cluster 3: Apply and extend previous understandings of numbers to the system of rational numbers. (MAJOR CLUSTER)

MAFS.6.NS.3.5	Understand that positive and negative numbers are used together to describe quantities having opposite directions or values (e.g., temperature above/below zero, elevation above/below sea level, credits/debits, positive/negative electric charge); use positive and negative numbers to represent quantities in real-world contexts, explaining the meaning of 0 in each situation.	Lesson 15	Understand Positive and Negative Numbers and Opposites—pp. 128–135
	<u>Cognitive Complexity</u> : Level 2: Basic Application of Skills & Concepts		

Domain: The Number System GRADE 6 STANDARD CODE / STANDARD SADLIER COMMON CORE PROGRESS MATHEMATICS, GRADE 6 **MAFS.6.NS.3.6** Understand a rational number as a point on the number line. Extend number line diagrams and coordinate axes familiar from previous grades to represent points on the line and in the plane with negative number coordinates. Cognitive Complexity: Level 2: Basic Application of Skills & Concepts Recognize opposite signs of numbers Lesson 15 **Understand Positive and Negative Numbers** a. as indicating locations on opposite and Opposites—pp. 128-135 sides of 0 on the number line; recognize that the opposite of the opposite of a number is the number itself, e.g., -(-3) = 3, and that 0 is its own opposite. b. Understand signs of numbers in Locate Points with Rational Coordinates-Lesson 16 ordered pairs as indicating locations pp. 136-143 in quadrants of the coordinate plane; recognize that when two ordered pairs differ only by signs, the locations of the points are related by reflections both axes. c. Find and position integers and other Locate Points with Rational Coordinates— Lesson 16 rational numbers on a horizontal or pp. 136-143 vertical number line diagram; find and position pairs of integers and other rational numbers on a coordinate plane. MAFS.6.NS.3.7 Understand ordering and absolute value of rational numbers. Cognitive Complexity: Level 2: Basic Application of Skills & Concepts Interpret statements of inequality as Lesson 17 Compare and Order Rational Numbers—pp. a. statements about the relative position 144-151 of two numbers on a number line diagram. For example, interpret -3 > -7as a statement that -3 is located to the right of –7 on a number line oriented from left to right. b. Write, interpret, and explain Lesson 17 Compare and Order Rational Numbers—pp. statements of order for rational 144-151 numbers in real-world contexts. For example, write $-3^{\circ}C > -7^{\circ}C$ to express the fact that -3° C is warmer than -7° C.

Domain: The Number System

GRADE 6 STANDARD CODE / STANDARD

- c. Understand the absolute value of a rational number as its distance from 0 on the number line; interpret absolute value as magnitude for a positive or negative quantity in a real-world situation. For example, for an account balance of -30 dollars, write |-30| = 30 to describe the size of the debt in dollars.
- d. Distinguish comparisons of absolute value from statements about order. For example, recognize that an account balance less than –30 dollars represents a debt greater than 30 dollars.
- MAFS.6.NS.3.8 Solve real-world and mathematical problems by graphing points in all four quadrants of the coordinate plane. Includ use of coordinates and absolute value to find distances between points with the same first coordinate or the same second coordinate.

MAFS.6.EE.1.1	Write and evaluate numerical expressions involving whole-number exponents. <u>Cognitive Complexity</u> : Level 1: Recall	Lesson 20	Write and Evaluate Numerical Expressions with Exponents —pp. 174–181
MAFS.6.EE.1.2	 Write, read, and evaluate expressions in which letters stand for numbers. <u>Cognitive Complexity</u>: Level 2: Basic Application of Skills & Concepts a. Write expressions that record operations with numbers and with letters standing for numbers. For example, express the calculation "Subtract y from 5" as 5 – y. 	Lesson 21	Write Algebraic Expressions to Record Operations—pp. 182–189

Domain: Expressions & Equations

GRADE 6 STANDAR	d Code / Standard	SADLIER COM	MMON CORE PROGRESS MATHEMATICS, GRADE 6
	 b. Identify parts of an expression using mathematical terms (sum, term, product, factor, quotient, coefficient); view one or more parts of an expression as a single entity. For example, describe the expression 2 (8 + 7) as a product of two factors; view (8 + 7) as both a single entity and a sum of two terms. 	Lesson 22	Identify Parts of an Expression—pp. 190–197
	c. Identify parts of an expression using Evaluate expressions at specific values of their variables. Include expressions that arise from formulas used in real- world problems. Perform arithmetic operations, including those involving whole-number exponents, in the conventional order when there are no parentheses to specify a particular order (Order of Operations). For example, use the formulas $V = s^3$ and A = 6 s^2 to find the volume and surface area of a cube with sides of length $s =$ 1/2.	Lesson 23	Evaluate Algebraic Expressions —pp. 198–205
MAFS.6.EE.1.3	Apply the properties of operations to generate equivalent expressions. For example, apply the distributive property to the expression 3 (2 + x) to produce the equivalent expression 6 + 3x; apply the distributive property to the expression 24x + 18y to produce the equivalent expression 6 (4x + 3y); apply properties of operations to y + y + y to produce the equivalent expression 3y. <u>Cognitive Complexity</u> : Level 1: Recall	Lesson 24	Generate and Identify Equivalent Expressions—pp. 206–213
MAFS.6.EE.1.4	Identify when two expressions are equivalent (i.e., when the two expressions name the same number regardless of which value is substituted into them). For example, the expressions $y + y + y$ and $3y$ are equivalent because they name the same number regardless of which number y stands for. <u>Cognitive Complexity</u> : Level 2: Basic Application of Skills & Concepts	Lesson 24	Generate and Identify Equivalent Expressions—pp. 206–213

Domain:	Expressions & Equation	ıs

	son about and solve one-variable d inequalities.		
MAFS.6.EE.2.5	Understand solving an equation or inequality as a process of answering a question: which values from a specified set, if any, make the equation or inequality true? Use substitution to determine whether a given number in a specified set makes an equation or inequality true.	Lesson 25	Identify Solutions to Equations and Inequalities—pp. 214–221
	<u>Cognitive Complexity</u> : Level 2: Basic Application of Skills & Concepts		
MAFS.6.EE.2.6	Use variables to represent numbers and write expressions when solving a real- world or mathematical problem; understand that a variable can represent an unknown number, or, depending on the purpose at hand, any number in a specified set.	Lesson 26	Write Algebraic Expressions to Represent Problems—pp. 222–229
	<u>Cognitive Complexity</u> : Level 3: Strategic Thinking & Complex Reasoning		
MAFS.6.EE.2.7	Solve real-world and mathematical problems by writing and solving equations of the form $x + p = q$ and $px = q$ for cases in which p , q and x are all nonnegative rational numbers.	Lesson 27	Solve Equations of the Form x + p = q—pp. 230–237
		Lesson 28	Solve Equations of the Form px = q—pp. 238–245
	<u>Cognitive Complexity</u> : Level 2: Basic Application of Skills & Concepts		
MAFS.6.EE.2.8	Write an inequality of the form $x > c$ or $x < c$ to represent a constraint or condition in a real-world or mathematical problem. Recognize that inequalities of the form $x > c$ or $x < c$ have infinitely many solutions; represent solutions of such inequalities on number line diagrams. <u>Cognitive Complexity</u> : Level 2: Basic Application of Skills & Concepts	Lesson 29	Graph Solutions to Inequalities—pp. 246– 253

Domain: Expressions & Equations GRADE 6 STANDARD CODE / STANDARD SADLIER COMMON CORE PROGRESS MATHEMATICS, GRADE 6 Cluster 3: Represent and analyze quantitative relationships between dependent and independent variables. (MAJOR CLUSTER) **MAFS.6.EE.3.9** Use variables to represent two quantities Lesson 30 **Represent Relationships Between** in a real-world problem that change in Variables—pp. 254–261 relationship to one another; write an equation to express one quantity, thought of as the dependent variable, in terms of the other quantity, thought of as the independent variable. Analyze the relationship between the dependent and independent variables using graphs and tables, and relate these to the equation. For example, in a problem involving motion at constant speed, list and graph ordered pairs of distances and times, and write the equation d = 65t to represent the relationship between distance and time. Cognitive Complexity: Level 2: Basic Application of Skills & Concepts
