

FoodLogiQ®

# 3 Key Elements to Supplier Transparency

Connecting your supply chain partners to drive efficiencies.

## Serving safe and high-quality food requires all of your suppliers working towards a common goal.

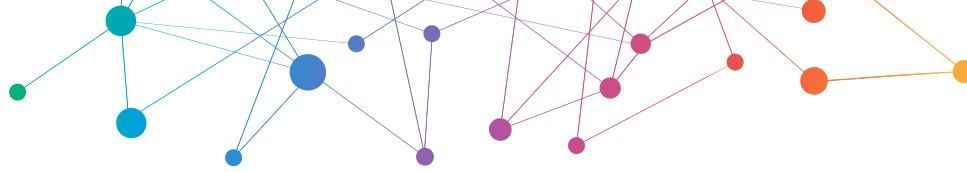

When you're on a mission for improved food safety and quality, it's important to make sure every member of your team is on board—from your internal team to your food suppliers. After all, your suppliers' role in your supply chain is essential to your mission. But how can you make sure everyone is on the same page?

To streamline your process and foster supplier engagement, start with a well-devised plan and clearly communicate your mission to your suppliers.

**How are you fostering collaboration to effectively work with your suppliers?**

## 3 Key Elements to Supplier Transparency

Engage Your  
Suppliers

Implement Thorough  
Onboarding

Support Open  
Communication

# 1 Supplier Engagement

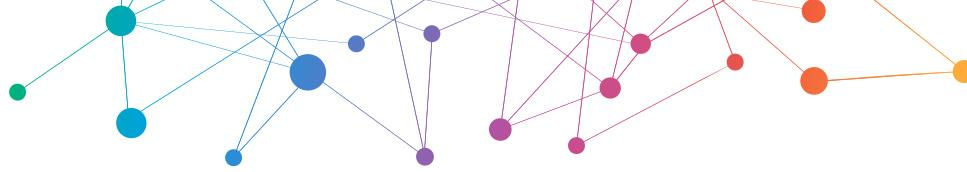

Legacy processes, multiple templates and a lack of information sharing across your supply chain results in delayed time to market and product inconsistencies.

Open and transparent communication is a must for addressing these issues. After all, you can't offer consumers the information they crave about your product and processes if you aren't getting that information from your suppliers. And you cannot expect a supplier to fulfill your needs if you aren't open about your expectations.

FoodLogiQ Connect can help you:

- Compile critical food safety documentation and records in a central, online community
- Fully document corrective actions and the steps taken to execute a recall with date/time stamps
- Execute workflow standards for your supply chain

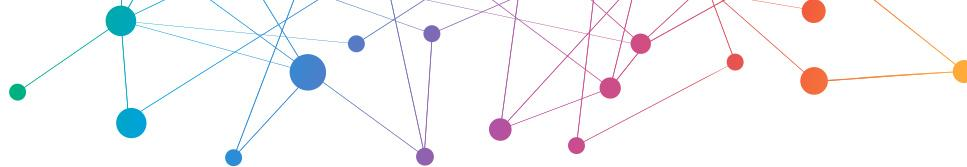

## 2 Thorough Onboarding

Once you begin working with a food supplier, take the time to thoroughly onboard them with your plans and processes. Having an onboarding system in place can help ease growing pains and work to develop your new food supplier into a trusted partner. For example, if you use a specific food industry technology, be sure your suppliers know ahead of time and are adequately trained to use your solution. This will make communication smoother for all parties involved.

FoodLogiQ Connect can help you:

- Build a dashboard of your suppliers and their performance
- Track approved and rejected suppliers
- Execute automated workflow tools for your team and your suppliers

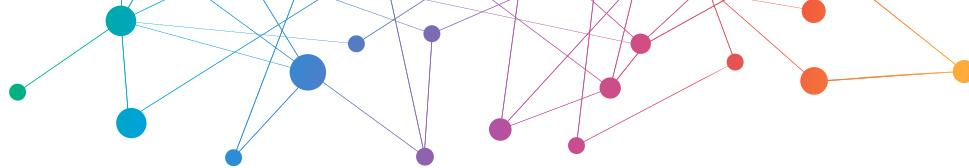

## 3 Open Communication

It is critical that you use open and transparent communication in all your business relationships in the food industry. Keep your suppliers in the loop on your current and future plans. This not only solidifies your relationship, but helps set a precedent for future goals.

FoodLogiQ Connect can help you:

- Share updates to your suppliers across your online community
- Engage with your suppliers to communicate all of your required supply chain documentation needs

**With FoodLogiQ Connect, you can achieve:**

## **Instant Record Availability**

Gather all of your supplier documentation in one place.

## **Verified Suppliers**

Execute supplier approval and verification workflows.

## **Proactive Risk Mitigation**

Get immediate visibility of your suppliers and their compliance status.

## **Integrated Recall**

When faced with a recall, notify suppliers, distribution centers and stores with the click of a button.

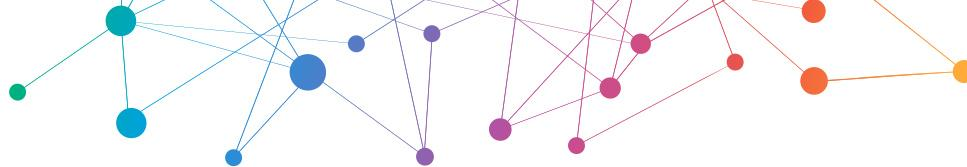

## **Simplified Audits**

Manage second and third-party audits of your supplier and facilities in a single platform with a mobile solution.

# 87%

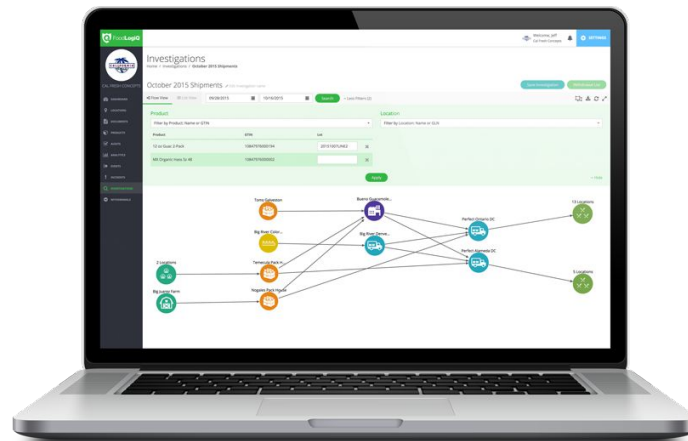

of consumers are more likely to purchase from companies that manage recalls “honestly and responsibly”

## FoodLogiQ Connect

With FoodLogiQ Connect, food companies can build an online supplier community, onboard suppliers all at once and stay on top of their audits and assessments. Manage quality incidents, report them directly to suppliers and recoup the costs of stock withdrawals. And with lot-level traceability, see exactly where your product is at all times, especially when it matters most during an investigation.

### Work with the Best

Leading food and beverage companies are effectively managing food recalls with end-to-end traceability software solutions. FoodLogiQ is the leading food traceability software solution on the market.
