PrizmDoc Editor

Compile. Control. Customize.

Harness the power of document automation & rich-text editing, securely inside your application.

The Challenge

Every organization faces the task of generating documents for review, negotiating changes, and getting the stamp of approval. Often times, that involves downloading documents, emailing revisions, and losing track of what version is final. This process can be time consuming and prone to human error. That doesn't even cover the security risks involved if the documents have sensitive information.

The Solution

Instead of spending valuable resources to build a new solution, why not integrate a solution that has it all? PrizmDoc Editor's document automation reduces time and improves quality when generating transactional documents. In addition, its document editing gives you feature parity with popular online editing tools, without the risk of temporary storage on public clouds or possible disclosure of personally identifiable information (PII). With whitelabeling and customization options, PrizmDoc Editor enables you to take full ownership of your brand without the time and money it would take to build a solution from scratch.

Our Functionality. Your Brand.

Customize PrizmDoc Editor to your specific application needs.

Business Features

Document Assembly — Automate the generation of transactional documents, enable standardization of your workflows, and ditch the copy/paste for good.

Document Editing — Gain feature parity with popular online editing tools, without the security risk and cost. Our browser-based document editor keeps your customers' content safe behind your firewalls.

White-Label and Customize — Deliver our functionality under your brand with the ability to customize the UI, and add, remove, or modify toolbars.

Deployment Made Easy — The PrizmDoc Editor server runs as a docker container, making it easy to deploy and manage. Run it on any dockerized host.

Functional Features

Track Changes — See what changes were made to a document by other users, and accept or reject changes as needed.

Commenting — Tag areas of a document with relevant information and collaborate with other users as part of a workflow.

Sections — Support documents with multiple sections including section specific headers, footers, and formatting.

Tables — Insert or delete tables, table columns, and table rows. Merge table cells or split the current cell into two cells.

Spellcheck — Everyone makes mistakes. Catch even the most severe spelling errors and fix them with a quick right click.

The Three C's of PrizmDoc Editor

Compile
Identify and assemble sections of pre-existing text into new, editable content.

Control
Keep document editing within the confines of your system to ensure security.

Customize
Configure the stock interface and white-label the UI to match your brand.
