PrizmDoc Viewer

More Than a Viewer

Create seamless viewing experiences for your users with our flagship HTML5 document viewer and collection of RESTful web services.

The Challenge

Organizations everywhere struggle with viewing and collaborating on documents securely. When it comes to collaboration, email just doesn't cut it. The process becomes complex with different platforms, file formats, tracked changes, and version control. Organizations need a centralized way to view, annotate, and redact information from documents securely.

The Solution

PrizmDoc™ Viewer is a solution that integrates into your current application to render and display a multitude of file types with high fidelity and speed. Due to its extreme flexibility, PrizmDoc Viewer can be supported on virtually any platform and in any programming language that supports REST API calls. Designed to run on every type of computing device, our zero-footprint viewer makes it easy for your users to work where and how they wish. Key features, like search and redaction, can be easily turned on/off and our whitelabel services give you the flexibility to brand, customize, and control the viewer depending on your application's needs. Flexible hosting options are also available including cloud, private cloud, and self-hosted.

> "I work with PrizmDoc Viewer on a day-to-day and week-to-week basis. It's easy to implement, and it saved us time and effort from a development standpoint. The fact that it's HTML5 was a big thing for us and the public documentation is very, very strong. A lot of companies say they will do it, but Accusoft has the code snippets and demos to prove it."

Brad Hickey,
Head of Engineering,
TEAM Informatics

Features

Viewing — Display dozens of file types with high fidelity and speed without the need to download additional software.

Conversion — Convert over 50 different file formats to PDF, TIFF, PNG, JPEG, or SVG with ease within your applications.

OCR — Quickly and accurately convert any image-based document into an editable text file or searchable PDF.

Annotation — Easily collaborate using feedback tools like text comment, highlight, strikethrough, arrow, stamp, and more.

Redaction — Manually or automatically remove sensitive information from documents before sharing to safeguard data.

eSignature — Digitally sign and date documents. Save signatures to use across multiple documents and browser sessions.

Forms Detection — Upload a PDF or raster image with form fields, and auto-detect and convert active fields for e-signing..

Document Comparison — Compare two versions of a Word document and see what changes were made between those two versions.

Watermarking — Add text, diagonal text, and image watermarks to impede unauthorized copying of shared documents.

Template-Based Forms — Create text, date, and signature fields to produce customized document templates for seamless workflows. versions.

Cloud APIs — Avoid the installation of any server-side software, and get up and running faster with PrizmDoc Cloud. We fully host and manage a powerful PrizmDoc server cluster for you.
