

# iCorps SaaS Protect

Your complete solution for backup and restoration of your SaaS data

Your day-to-day operations and productivity depend on the accessibility and health of your data.

## iCorps SaaS protect backs up your **essential SaaS data** in the event of a data disaster.

The single leading cause of data loss in cloud-based applications is end-user error. Other common culprits include:

- **Malware damage or ransomware attacks**
- **Malicious end-user activity**
- **Operational errors such as accidental overwrites**
- **Lost data due to a canceled account subscription**
- **External application errors (data corruption via syncing or overwriting)**

With more and more companies depending on cloud applications, these risks are impossible to ignore. Best practices like data backup are just as important in the cloud as in traditional on-premises IT systems. An independent backup separated from the application itself is necessary to avoid the most common data loss pitfalls.

### Highlights:

#### **COST-EFFECTIVE**

Digital environment means no physical storage requirements. Simply pay a one-time provisioning cost and a flat monthly fee based on users, not volume of data.

#### **NO WORRIES**

SaaS Protect ensures your business critical information can be recovered easily after user errors, malicious activity, or provider outage.

#### **FAST AND SECURE**

A quick and painless restore and export avoids business downtime. Restore data without overwriting existing files or site collections targeted at the same URL.

An astonishing  
**1 in 3**  
**companies**  
report losing  
data stored  
in cloud-based  
applications.

That means  
the **permanent**  
**deletion** of  
potentially  
hundreds of  
work hours.

## Cloud-to-Cloud Backup

While services like Office 365 and Google Cloud offer high availability platforms, there are no native backup capabilities.

**iCorps SaaS Protect offers peace of mind by easily restoring your SaaS data in minutes.**

## Why iCorps SaaS Protect?

Skip the uncertainty and know your SaaS data is backed by the most complete solution on the market today. Reduce risk and spend more time and budget on strategic initiatives.

- **Point in time backups:** Backups include daily snapshots of data. Avoid data loss by restoring entire accounts to a designated point in time before an attack occurred.
- **3 times a day backup for your SaaS data:** Rest easy with iCorps SaaS Protect's automatic daily backups for your data.
- **Infinite retention:** Store an unlimited amount of data in private cloud, purpose-built for backup for no additional fees.
- **Helps meet compliance requirements:** Data retention is not considered a backup if you have a requirement to maintain digital records for a period of time.

## What SaaS Protect Recovers:

### Office 365

- OneDrive
