

Symitar® EASE™ by the Numbers

GAINING TRACTION

Symitar EASE is the outsourced delivery model of Symitar's Episys® core processing platform. We first introduced EASE in 2002 and since then have experienced tremendous traction with credit unions electing to outsource.

For the first time in the history of Symitar, we now have more clients who are outsourced than running Episys in-house.

ASSET SIZE

\$4.3B

LARGEST CLIENT

\$20M

SMALLEST CLIENT

SUPPORT FOR ALL SIZES

EASE is for credit unions of all sizes. Our smallest client has \$20M assets; and our largest has over \$4B.

THE TREND IS TO OUTSOURCE

In 2019, 16 of 19 new credit union clients selected outsourcing as their deployment strategy. During the same time period, 37 current credit union clients switched from in-house to outsourced.

THE BOTTOM LINE

More and more credit unions are choosing to focus on their core competencies by letting Symitar handle all things related to their core hardware.

With Symitar EASE, you can align valuable resources to execute upon the credit union's strategic business plan for growth, while unshouldering the burden of compliance, security, disaster recovery, business continuity, and the recurring investment needed in hardware.
