Active Directory Monitoring and Reporting

Why is Monitoring Important?

Active Directory is the foundation of your network. It is the structure that manages and controls access to some of the most critical resources in your organization. If your Active Directory is not properly configured and administered, this will result in service outages and, worse, security breaches.

Areas Monitored with Enow

Go beyond generic monitoring - ENow delivers comprehensive monitoring on all key components of your environment. Our OneLook dashboard displays vital elements of Active Directory, enabling IT pros to quickly identify issues before they become outages.

- Real Time Network Monitoring
- Verification of Core AD Services
- Active Directory Performance
- Core Operating System Monitoring
- Name Resolution Verification
- Replication Monitoring
- AD Backup Verification
- Global Catalog & FSMO Role

“Providing support for an infrastructure that spans multiple countries can be a daunting task. From the first day we implemented Compass, we've recorded lower reaction time to issues and better compliance with our SLAs. Compass has allowed us to react quicker and be proactive. A great product from a great company!”

-John O'Neil, SR., CTO at MFG

Active Directory Reporting

ENow's advanced reporting provides both real-time data and historical trends. This enables IT pros to accurately utilize resources to meet growing demands and determine if service levels are being met. ENow contains over 50 of the most commonly-requested reports, plus the ability to customize or create new ones.

User

- Home Drive
- Logon script
- Fine grained password policies
- Disabled & locked out accounts
