

## Evoqua Water Restored Metal Roof

<b>Size:</b>	16,000 square feet
<b>Location:</b>	Milpitas, California
<b>Products:</b>	AcryShield A510
<b>Contractor:</b>	Just Leaks, Inc.

### Challenge: Aged Leaking Metal Roof

- › Old metal panel roof had numerous recurring leaks.
- › Built-in gutters had chronic leaks and fiberglass skylight were deteriorated and no longer usable.
- › Portions of the roof used a very thin gauge metal, prone to bending when stepped on.
- › Client had quotes from other roofers to replace metal panels at a cost that was prohibitive.

### Solution: AcryShield Restoration System

- › Sealed entire gutter system with one part urethane and polyester.
- › Framed in skylights and used SPF roof membrane over skylights and thin-metal panel areas.
- › AcryShield products created a watertight, monolithic membrane across the entire roof field.

*The client is very pleased with much cooler temperatures in the warehouse during the summer. Facility manager used to be afraid to walk on the thin metal panels, but now feels very comfortable as the SPF greatly stiffened and strengthened the roof panels. New SPF and AcryShield roof with urethane and polyester gutters was less than half the cost of replacing the panels and gutters with no disruption to building operations.*
