Fenwal Engineered Fire Suppression System
Designed for use with 3M™ Novec™ 1230 Fire Protection Fluid

900 lb. Cylinder Component Sheet

P/N: 44-100900-001 and 44-100901-001

FEATURES
• Large Capacity Novec™ 1230 Cylinder
• 3-Inch Discharge Valve
• Optional Liquid Level Indicator
• Optional Low-Pressure Switch (P/N 06-118263-001)
• FM Approved
• UL Listed
• TC Approved

DESCRIPTION
Fenwal Engineered Fire Suppression System 900 lb. cylinders store 3M™ Novec™ 1230 Fire Protection Fluid super-pressurized with dry nitrogen to 360 PSIG at 70°F (2.48 Mpa at 21°C). The cylinders are painted red and are equipped with a 3-inch pressure differential valve, pressure gauge, optional liquid level indicator and optional low-pressure switch assembly. The pressure relief device is also located on the cylinder head.

OPERATION
The agent storage container discharges when the actuation assembly operates, causing the pressure differential valve to open. All of the Fenwal actuators may be used to actuate the 900 lb. cylinder. The only exception is the 48650001, which is not compatible with this cylinder valve.

INSTALLATION
The container is installed in a vertical position with the valve assembly pointing up. Interconnection to discharge piping is 3-inch NPT. Interconnection can be via a 3-inch flex hose (P/N 06-118225-001) or via a suitably pressure rated groove style fitting.

The container is secured in place by a mounting bracket (P/N 236125), which must be fixed to a solid wall or strut assembly. After the container is securely mounted it is connected to discharge piping per the directions in the design manual.

An optional cylinder supervisory pressure switch (P/N 06-118263-001) can be installed on the cylinder valve in the field if required. This cylinder supervisory pressure switch has a 1/8” NPT connection, which is used on the 3-inch valve only.

MAINTENANCE
According to NFPA standards the following inspection and/or maintenance procedure must be scheduled as listed below and performed upon the occurrence of any event which might affect the reliability of the system.

QUARTERLY INSPECTION
1. Check the pressure gauges of each agent storage container. If the pressure gauge indicates a loss in pressure of 10% or more, then it shall be recharged or replaced. Pressure varies with temperature, and this must be taken into account when checking the pressure gauge.
2. Check all components, including supporting hardware, and tighten, repair or replace as required.
3. Replace any component if at all in doubt of its ability to perform properly.

ORDERING INFORMATION
The part number for ordering the Fenwal Engineered System 900 lb. cylinder without liquid level indicator is 44-100900-001. The part number for ordering the Fenwal Engineered System 900 lb. cylinder with liquid level indicator is 44-100901-001.
SEMI-ANNUAL INSPECTION
Qualified personnel should determine the amount of agent in all containers. The optional liquid level indicator may be used to measure agent supply and compare it to the original net weight which is marked on the container label. If the measured net weight is less than 95% of the original charged weight the container should be recharged or replaced.
Inspect all piping, fittings and nozzles for looseness, dirt or other damage. All outlet piping must be clean and free of dirt, chips, fillings and other foreign material that may cause the system to become inoperative or ineffective at the time of discharge.
