

## Header Safety

### Description

The header safety is a device used to relieve high pressure build-up in a closed section of piping. If actuation pressure should get inadvertently trapped and should an increase in temperature cause the pressure to rise to a dangerous level, the burst disc in the header safety will rupture, allowing the pressure to escape. The header safety is available with 1/2 in. or 3/4 in. NPT threads.

Shipping Assembly Part No.	Description
40094	1/2 in. header safety
40076	3/4 in. header safety
78756	Replacement burst disc
