Dev Ops Engineer

Reveleer is a fast-growing start up based in Glendale, CA. We empower managed care organizations nationwide to take control of their Risk Adjustment and Quality Improvement initiatives to improve quality of care and optimize revenue performance.

We are seeking a Dev Ops Engineer with experience in working with and developing in an AWS environment. You will work as a member of our Security and Engineering teams, managing deployments and ensuring that critical systems are functioning securely, effectively, and consistently.

What You'll Do:
* Help scale our platforms to handle anything thrown at them
* Collaborate across teams to build and maintain secure development and production environments
* Ensure 24x7 stability and be available as necessary to troubleshoot urgent issues
* Establish amazing transparency of system performance through monitoring
* Work directly with engineers to review their designs and improve their technical strength
* Build, maintain and monitor cloud and corporate networks that employ enterprise security tools such as VPN, SIEM, IDS/IPS, HIDS, WAF, etc.; as well as basic Firewall Administration, corporate security
* Drive change and develop highly reputable processes and have a desire to automate EVERYTHING
* Maintain Cloud platforms such as AWS, container technologies such as Docker & Kubernetes, CI & CD tools, monitoring and other tools related to web operations such as New Relic
* Web Development DevOps support for SaaS platform build with TFS leveraging Angular, .NET Core, and MS SQL Server and related technologies and plugins
* Maintain data files and monitors system configuration to ensure data integrity. Support the delivery of mission critical data to the appropriate people in and outside the company
* Maintain the functionality, security, and uptime of critical technology systems networks, AWS, and storage infrastructure, and communication systems
* Support CISO with security related vendor questionnaires, evaluations, and requests

About You:
* 4+ years of overall professional engineering related experience
* 2+ years of demonstrable systems experience in scaling web, mobile, data and systems platforms
* 2+ years of IDS/IPS/HIDS systems, DLP systems, firewalls, SIEM systems, and vulnerability scanning tools. Security Certifications a plus!
* Strong hands-on technical knowledge of AWS
* Ability and desire to share technical vision and build consensus
* Strong knowledge of dev tools, quality tools, DevOps platforms, and the latest trends in all three
* Proficient in leveraging CI and CD tools to automate testing and deployment
* Automation experience with AWS CloudFormation
* Experience working with the following tools: Docker, Kubernetes
* Solutions oriented
* Experience in Realtime Monitoring: AWS Cloud watch, New Relic and Splunk
* Ability to be strategic and execute fast in a fast pace environment
* Motivated and ambitious, interested in growing and developing
* Bonus points for experience in HITRUST or Soc2 compliant environments

What You'll Receive:
- Competitive Salary
- Medical, Dental and Vision benefits
- 401k
- Vacation and holidays
- No commute to the Westside, dog friendly office, unlimited snacks, social gatherings and much more!
