

WF9000/XLT

4 Post Car Lift | 9,000lbs

Why Are Wildfire Lifts Arguably The Safest, Highest Quality 4 Post Car Lifts On The Market?

We offer you a new style of 4 post car lift that is hands down one of the safest lift you can buy. We can offer this as this lift series utilizes a ground up re-engineering of what a car lift has been for the last 25+ years. Some of the best structural engineers around designed this new style of lift with a wraparound sliding post locking mechanism. This has allowed the new design to achieve a superior level of safety by eliminating almost all the wobble, sway and drastically decreasing the possibility of structural lock failure that can be more typical of a c-channel style lift (direct lift, challenger lifts, bendpak, etc..) This design eliminates almost all chance of structural lock failure by utilizing around post sliders (see pictures). Not only does this add safety, stability and comfort but also gives a more aesthetically robust look and feel to compliment your garage and space.

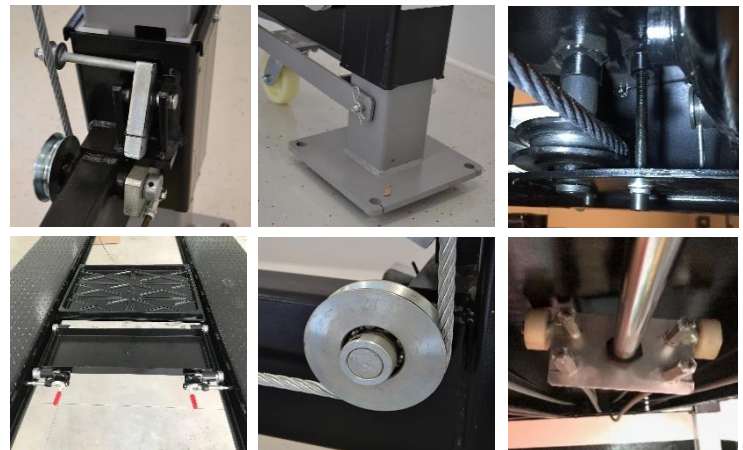

Now, we know you can certainly find lifts for a cheaper price, they are all over, but these products are so inferior to what we offer you are certain to run into "you get what you pay for". As true car enthusiasts we offer a product that is designed to last the entirety of your car collecting days, working just as good on day 1 as it does years and years from now.

We are not the biggest car lift company on the market but we are certainly the most devoted. As true car guys we have spent countless hours and funds to offer a product we know other car enthusiast, you, will love!

If you're looking to clear space, add another car to the collection, another tool to your shop/garage or if you're simply done working on your back, you have come to the right company.
