# OptimizeBI

One of the biggest issues with OBIEE is that customers often fail to optimize their systems for performance. Slow analytical and data processes disappoint users, which can lead to the worst possible outcome — abandonment and failure of a BI project. There are no quick fixes for making OBIEE faster for your users, but that doesn't mean you should abandon your BI implementation.

Our leading OBIEE performance experts have designed OptimizeBI, a performance monitoring platform to help you discover bottlenecks in your system. Combined with experienced consultant knowledge, OptimizeBI is the best way to boost performance and increase user adoption.

# Performance Analysis Report

Based on statistical analysis of OBIEE Usage Tracking data, the Performance Analysis Report explains the key performance principles of OBIEE and uses your data to put it in context. This identifies areas where you can get the most value out of your performance and focuses on:

- Breadth of user base
- Frequency of execution
- Cumulative run time

# Onsite Consultancy from a Performance Expert

OptimizeBI includes 2 weeks of onsite consultancy from one of our OBIEE performance experts.

The experts will first use the Performance Analysis Report to discuss the project's requirements and expectations with the business and technical owners of the system. They will then document recommendations to improve the performance of the system based on analysis.

# OptimizeBI Dashboards

This set of web-based dashboards presents a unified view of OBIEE metrics, both real-time and historical. Through this interface, correlations are easily made and investigated to find bottlenecks.

By collecting data from a variety of sources — such as OBIEE Usage Tracking, OBIEE logfiles, Active Session History, and Operating System metrics — insights can be gathered from the full application stack.

# Optimize Notifications

OptimizeBI capabilities don't stop at monitoring; they also include performance alerts. You're able to learn about failure conditions in real time, not after the fact. Receive an immediate notification if an OBIEE component fails, disk space is rising at a dangerous pace, or a troublesome report execution starts getting out of control.

# Ongoing Support

OptimizeBI is best when used with our expert support team, who will enhance the performance of your system and monitor the improvements made with the tool's dashboards.

# Training from the Experts

In addition to customized and thorough OBIEE system performance analysis, our experts train you with our tested, proven methods and tools, enabling you to continue the journey to optimal OBIEE performance.

# Request a Demo!
