

BEAM Test 4.2 Software

Review the Beacon Enterprise Application Manager (BEAM) Test 4.2 software release notes before using BEAM Test 4.2.

- What's new in BEAM Test 4.2?
- Installation files provided with BEAM Test 4.2
- Test configurations certified with BEAM Test 4.2

What's new in BEAM Test 4.2?

BEAM Test 4.2 includes the following improvements:

- Test script debugging features to step through the logic of the more complicated scripts.
- Integration to HP's Quality Center application to post results from BEAM Test directly into Quality Center's Application Lifecycle Management's (ALM) test plans.
- Reversed the default settings when defining a new element checkpoint to reflect the business validation (field values) instead of the technical validation (customized field settings).
- This release is compatible with .NET Framework 4.6. The installer package will ensure the .NET 4.6 is present on the machine and, if not, download and install it from the Microsoft site.

Installation files and documentation provided with BEAM Test 4.2

BEAM Test 4.2 consists of the following installation files:

- BEAMTestPackage.exe
- BEAM Test License – <your company name>.msi is the license installer.
