LABOR TRACKING

Keep track of worker activity with the accuracy and fairness your team deserves.

The Labor Tracking Module is an online job tracking system that allows you to track actual work performed for specific work order operations. MAX Labor Tracking allows the computer to act as a time clock, resulting in more accurate run and setup times. Labor Tracking helps you identify direct and indirect labor or machine hours and can interface with your company's payroll system.

WITH LABOR TRACKING, YOU CAN:

1. Refine run and setup times for your standard part routings
2. Calculate efficiencies by employee
3. Track indirect labor costs by GL account
4. Measure employee and work center productivity and efficiency by time period
5. Integrate with Crystal Reports to run reports for labor, Time Tickets, and Workcenters

Labor Tracking Highlights

- Maintain employee data such as pay scales, pay rates, work shifts, and overhead rates.
- Assign hourly pay scales per employee and set system hours per shift.

Three Labor Collection Methods

- **Real Time:** Take advantage of the integrated capabilities of MAX by using the MAX Data Collection module to post employee login and logout data directly to orders without manual data entry.
 - System supervisor override allows maintenance of adjustments.
 - Display all employees currently working on an operation.
 - MAX automatically records transaction history information for all posted labor transactions, providing an accurate audit trail of work performed at all times.
- **Login/Logout:** Manage employee work on an individual, employee ID basis. Employees manage their own labor entry by manually logging in and out of each work order operation.
 - **Time Ticket:** Use Time Ticket Entry to enter employees' reported time worked for specific work order operations as a batch process.

The image shows two overlapping software windows. The 'Employee Master 1' window contains fields for Employee ID (1000), Labor Type (E - Employee), Employee Name (First: TED, Last Name: ROOSEVELT), SSN, Default Work Center (EASSY), Normal Pay Rate (15), Indirect Labor Account Type (A), Supervisor ID (TJ), Overtime Allowed (checked), and UDF Key. The 'Employee Work 6' window shows details for Employee ID 1000, Name TED ROOSEVELT, Login Date 10/04/2016, Login Time 11:53:00, Record Status (Closed), Record Type (W-Work), Work Order (30000001), Operation Sequence (0010), Labor Type (E - Employee), Work Center (EASSY), Shift (1 - First), Start Date 10/04/2016, Start Time 11:53:00, End Date 10/04/2016, End Time 12:26:20, Elopod Time (Hours) 0.555556, and Quantity Completed (?).

MAX Labor Tracking seamlessly integrates with MAX Data Collection to help you track your business' labor hours quickly and accurately so you can capture and report the data that reveals how well your labor is being utilized.

Now there is an easier, more effective way to track labor hours. Enhance your MAX System with MAX Labor Tracking today! Please contact your Account Manager for details.

Maintain important employee data

The image shows two overlapping software windows. The 'Time Ticket 1' window displays Date (10/04/2016), Employee ID (1100), Employee Name (WOODY WILSON), Ticket (10123), and Total Time (03:42). The 'Open Work Records Inquiry 3' window shows a table with columns: Employee ID, Employee WorkCenter, Employee Name, Login Date, Login Time, Order No., Seq. #, Part, Lot Number, and WorkCenter. The table contains 5 rows of data.

Employee ID	Employee WorkCenter	Employee Name	Login Date	Login Time	Order No.	Seq. #	Part	Lot Number	WorkCenter
1000	EASSY	TED ROOSEVELT	10/04/2016	11:53:00	30000010000	0010	11000		EASSY
1100	IPQA	WOODY WILSON	10/04/2016	12:10:00	50000020000	0010	11150		IPQA
1100	IPQA	WOODY WILSON	10/04/2016	12:10:00	50000022000	0010	11150		IPQA
1300	ETEST	Juliet Adams	10/04/2016	12:01:00	30000015000	0010	11000		EASSY
1300	ETEST	Juliet Adams	10/04/2016	12:02:00	50000019000	0025	11000		ETEST

Enter employees' reported time worked for specific work order operations for both direct and indirect labor. View all employees with open work records
