What Interactive Area Size Can I Get With My Budget?

We break down the interactive size and cost in this infographic so you can get a clear picture of how much you get for your budget! The size of the interactive area should align with how you will use the interactive solution. A collaborative area with several students working together needs to be fairly large in order to make the collaboration effective. A small room where the focus will be on presenting or viewing videos may be best suited for a less expansive area with HD capability.

This will help give you more information so you can select what will work for your classrooms, teachers, and students.
